"KOREA"	TUESDAY, 28th July, at Noon.

Record Trip Yokohama to San Francisco made by S.S. "KOREA," 12,000 tons, Oct. 18th-28th, 1902; 10 days, 15 hours.

THE O. & O. Company's Steamship "GAELIC" will be despatched for SAN FRANCISCO, via SHANGHAI, NAGASAKI, KOBE, INLAND SEA, YOKOHAMA and HONOLULU, on FRIDAY, the 22nd instant, at Noon, taking Freight for Japan, the United States, and Europe. Passengers are allowed to break their journey at any point en route.

Through Passage Tickets granted to England, France and Germany by all trans-Atlantic lines of Steamers, and to the principal cities of the United States and Canada.

Passengers holding through ORDERS TO EUROPE have the choice of the Overland Rail Routes from San Francisco, including the SOUTHERN PACIFIC, CENTRAL PACIFIC, UNION PACIFIC, DENVER and RIO GRANDE, and NORTHERN PACIFIC RAILWAY; also the CANADIAN PACIFIC RAILWAY on payment of 24 in addition to the regular tariff rate.

Passengers holding Orders for OVERLAND CITIES in the United States have between SAN FRANCISCO and CHICAGO, the option of the SOUTHERN PACIFIC, CENTRAL PACIFIC, UNION PACIFIC, DENVER and RIO GRANDE, and other direct connecting lines, and from Chicago, to destination the choice of direct line.

Special rates (First-class only) to European Ports, are granted to Missionaries, Members of the Naval, Military, Diplomatic and Consular Services, and European Civil Service Officials located in Asia, and to European Officials in the Service of the Governments of China, and Japan.

TO UNITED STATES and CANADIAN PORTS, Special rates (first class only) are confined and will apply only to Missionaries, Members of the Naval and Military Services, and to Consular and Diplomatic Officials of the Governments of China and Japan.

Return Passage.—Reduction will be made to passengers who do not hold return tickets, making the return journey between ports in the Orient and Honolulu or beyond, within twelve months.

Through Bills of Lading issued for transportation to Yokohama and other Japan Ports, to San Francisco, to Atlantic and Inland Cities of the United States, via Overland Railway, to Havana, Trinidad, and Demerara, and to ports in Mexico, Central and South America, by the Company's and connecting Steamers.

Freight will be received on board until 4 P.M. the day previous to sailing. Parcel Packages will be received at the Office until 5 P.M. same day; all Parcel Packages should be marked to contain in full; value of same is required.

Consular Invoices to accompany each shipment of Cargo or parcel (valued at \$100. Gold or over) destined to Ports, beyond San Francisco, in the United States, should be sent to the Companies' Office addressed to the Collector of Customs at San Francisco.

Merchant's Invoice will be sufficient for cargo or parcel (each shipment) when the value is less than \$100. U.S. Gold.

For further information as to Passage and Freight, apply to the Agency of the Companies, Queen's Building.

E. W. TILDEN, Agent.

Hongkong, 14th May, 1903.

CANADIAN PACIFIC RAILWAY COY.'S
ROYAL MAIL STEAMSHIP LINE.

SAFETY. SPEED. PUNCTUALITY.

THE FAST ROUTE BETWEEN CHINA, JAPAN AND EUROPE, VIA CANADA
AND THE UNITED STATES.

(CALLING AT SHANGHAI, NAGASAKI, KOBE, YOKOHAMA & VICTORIA, B.C.)

"EMPRESS" Twin Screw Steamships—6,000 Tons—10,000 Horse Power—Speed 19 Knots.

PROPOSED SAILINGS FROM HONGKONG.

(SUBJECT TO ALTERATION).

R.M.S. "ATHENIAN"	3,882 Tons	WEDNESDAY, 27th May.
"EMPRESS OF CHINA"	6,000 "	WEDNESDAY, 3rd June.
"EMPRESS OF INDIA"	6,000 "	WEDNESDAY, 10th June.
"EMPRESS OF JAPAN"	6,000 "	WEDNESDAY, 17th June.
"TARTAR"	4,425 "	WEDNESDAY, 24th June.
"EMPRESS OF CHINA"	6,000 "	WEDNESDAY, 1st July.
"ATHENIAN"	3,882 "	WEDNESDAY, 12th August.
"EMPRESS OF INDIA"	6,000 "	WEDNESDAY, 26th August.

THE magnificent "EMPRESS" Twin-screw Steamships of this Line pass through the famous INLAND SEA OF JAPAN, and usually make the voyage YOKOHAMA TO VANCOUVER (B.C.) in 12 DAYS, ("TARTAR" and "ATHENIAN" 14 DAYS), saving THREE DAYS TO A WEEK in the Trans-Pacific journey, and make connection at Vancouver with the PALATIAL OVERLAND TRAINS of the CANADIAN PACIFIC RAILWAY which leave daily, and cross the Continent FROM THE PACIFIC TO THE ATLANTIC WITHOUT CHANGE. Close connection is made at Montreal, Quebec, Halifax, New York and Boston with all Trans-Atlantic Lines, which passengers to Great Britain and the Continent are given choice of.

Passengers Booked through to all principal ports and AROUND THE WORLD. Return tickets to various points at reduced rates. Good for 4, 6, 9 and 12 months.

SPECIAL RATES (First class only) granted to Missionaries, Members of the Naval, Military, Diplomatic and Civil Services, and to European Officials in the Service of China and Japan Governments.

The attractive features of the Company's route embrace its PALATIAL STEAMSHIPS, (second to none in the World), the LUXURANCE OF ITS TRANS-CONTINENTAL TRAINS (the Company having received the highest award for same at Chicago World's Exhibition), and the diversity of MAGNIFICENT MOUNTAIN AND LAKE SCENERY through which the Railway passes.

THE DINING CARS AND MOUNTAIN HOTELS of this route are owned and operated by the Company, and their appointments and Cuisine are unexcelled.

For further information, Maps, Guide Books, Rates of Passage, &c., apply to D. E. BROWN, General Agent, Pender's Street.

"HER-
CU-
LEX"

for

Nerve

Weakness

"HER-CULEX" is the latest invention of Dr. Sander, the pioneer of Self-Treatment with Electricity. Popular throughout the world as a natural, common sense remedy for Nerve and Brain Exhaustion, Indigestion, Constipation, Pain in the Back, Rheumatism, Declining Vigor, Urinary Weakness, Sluggish Organs, Impotency, etc.

Not "a cure-all" but an ideal cure for all disorders or weakness resulting from overwork or excess of any nature. It is simple, harmless, convenient; has a perfectly constructed battery enclosed in comfortable cloth case. Worn about the waist nights, or during the evening, the mild, soothing currents invigorate the nerve and vital centers, awaken dormant nerves, strengthen relaxed muscles and induce natural secretion of the vital fluids. This improves digestion, enriches quality of the blood and accelerates its circulation, and has a direct beneficial influence upon the bowels, regulating their action in a natural way. Used during a period of rest, it conforms with the processes of Nature in every way.

Dr. Sander's method of self-treatment, WITHOUT DRUGS, is the only self-treatment consistent with natural law and appeals to reason and common sense as filling a long felt want among those who are neither sick nor well, who are "all run down," and just dragging along in a half hearted manner; also, to those who have concluded that drugs cannot cure them. With ordinary care, "HER-CULEX" will last for one year, is not bulky, makes no noise and is as comfortable as your clothing. If you are weak or otherwise ailing, send for Dr. Sander's latest book, "Health in Nature," free upon request, securely sealed.

Every weak man should read it. It will prove interesting to you, as it has to others who had despaired of recovery by other means. Send at once and write name plainly. Address, mentioning this paper.

FREE BOOK

Water on blocks, 27.5 ft. Time to
pump out, 4 hours.

No. 2 DOCK.

Length inside, 375 ft. Width of
entrance, top 80.5 ft.; bottom 45.8
ft. Water on blocks, 26.5 ft. Time
to pump out, 2 hours.

THESE DOCKS are conveniently situated in Yokohama harbour and the attention of Captains and Engineers is respectfully called to the advantages offered for Docking and repairing Vessels and Machinery of every description.

The plant and tools are of recent patterns for dealing quickly and cheaply with work, and a large stock of material is always at hand, (plates and angles all being tested by Lloyd's surveyors).

Two powerful Twin Screw Towboats are available for taking Vessels in or out of Dock, and for taking Sailing Vessels in or out of the bay. The floating derrick is capable of lifting 35 tons.

Steam Launches of Steel or Wood, Lighters, Steel Buildings and Roofs, Bridge Work, and all kinds of Machinery are made on the premises.

Tenders will be made up when required and the workmanship and material will be guaranteed.

The cost of Docking, and repair work, will be found to compare favourably with that of any port in the world:

**THE STRAITS CURRENCY
COMMISSION REPORT.**

The telegram we published on the 7th instant from our Special Correspondent at Singapore placed before our readers, in a succinct yet intelligible form, the substance of the report of the Straits Currency Commission. The text of the report was awaited for in the Colony with considerable interest and its publication in *extenso* in these columns on Friday last added but little information to what was comprehensively conveyed by means of our special wire of the 7th inst. The report commits itself to no actual recommendations. The gist of it is to the effect that, should the Straits people so desire, there is no apparent difficulty in the establishment of a gold currency. It also—in the event of such a currency being determined upon—suggests a scheme for the minting of a Straits dollar, but leaves the matter of determining and fixing the standard value of that dollar to the Straits Settlements. "It may be convenient to recapitulate the contents of this document. Reciting the instructions which were received from the Colonial Office by the chairman on the 12th November last, the Committee were called upon to make a report with reference to—(1.) The expediency or otherwise of introducing a gold standard of currency in the Straits Settlements and the neighbouring Malay States. (2.) The practicability of making the change and the step which in the opinion of the Committee should be taken to effect this object if the change should be decided on." In refraining, therefore, from making any definite currency recommendations, the Committee were keeping strictly within the letter of their instructions. The document, as correctly characterized, is, strictly speaking, in the nature of a "non-committal compilation." Paragraphs 3 to 5 mention the countries falling within the scope of the Committee's inquiry, and they include, as is well known, in addition to the Colony of the Straits Settlements, the Federated Malay States of Perak, Selangor, Negri Sembilan and Pahang, and also the State of Johore. The next four paragraphs deal with the existing currency and cite the laws and enactments by which the present currency is regulated. The note issues of the Government and of the two authorized Banks—the Hongkong & Shanghai and the Chartered Bank of India, Australia & China—is referred to in the 10th to the 14th paras. inclusive. The incorporation of the recent history of currency in the Straits Settlements in the report is a feature without which the completeness of the document would be found wanting. The Committee devote no less than nine paragraphs to this section, the history of the consideration of a gold standard for the Straits Settlements not having been traced back further than the year 1893. With this history, the Colony is but too well acquainted, since at every stage of the movement in our sister colony to obtain a currency reform, not only has Hongkong been consulted, but its co-operation, though not possible of achievement, sought for. By far the more important section, after the scheme of conversion, is that dealing with the expediency of the change, which necessarily takes precedence over the discussion of the scheme. No less than about one-third of the whole report is taken up by this one section. In considering the expediency of the proposed change in the standard of value, the Committee have not thought it necessary to enter at any length into an examination of the many varied questions of somewhat abstract and theoretical nature. The question at issue is whether it is better for the Straits Settlements and the neighbouring Malay States at the present time, and under existing conditions, to maintain the silver standard or to change to a gold one, and the Committee have endeavoured as far as possible to treat the matter from a practical standpoint. In this view they have considered the papers and documents as would assist them in forming a correct view of the economic position of the Straits Settlements, as well as of the commercial and financial relations of that Colony with the neighbouring States. They have also examined a number of witnesses—seventeen

in all—whose names are as follows and who have had a personal experience of the modes of conducting business in the Straits Settlements and the East generally:—Sir Thomas Jackson, the Dato Abdul Rahman, and Messrs. W. G. Gulland, P. D. Thomson, J. Burkinshaw, G. Perille, R. Campbell, J. Heim, S. R. Carr, C. W. Butt, J. Fraser, E. M. Underdown, J. A. Pixley, R. Craig, F. Shaw, T. H. Whitehead, I. Bar Robertson. It is important to note that although these witnesses are not unanimous the majority of them are in favour of the establishment of a gold standard. After sifting the arguments both for and against the expediency of a change with considerable patience, care and consummate skill and with perfect impartiality, the Committee arrived at the conclusion that while they do not think a gold standard should be pressed on the Straits Settlements against the wishes of the Government and the people, they are equally of opinion that no objection should be raised on the part of His Majesty's Government to the principle of the change, if the Government of the Straits Settlements, after considering all sides of the question, should decide finally in favour of an alteration from the silver to the gold standard. We are then taken into the next and final stage of the report—the practicability of the change. In this respect the Committee unanimously consider the proposals they offer as a perfectly safe and sure method of establishing a gold standard involving no risk and creating the minimum of disturbance, while they do not anticipate that any very serious delay would occur before the gold standard became effective. Summarizing the plan in the words of our senior Straits contemporary, "the Commission advises the introduction of a special coin as the metallic currency of the united currency area to be called a Straits dollar, and to be as to weight and fineness identical with the British dollar now current in the East on its own value as silver. The change would be gradual, and until the time had arrived for the demonetisation of the present British and Mexican dollars, the coins would have concurrent circulation with the new Straits dollars, this of course still merely having its natural exchange silver value. But the machinery of the change now begins to be put into operation. During the change, which need not be so very protracted, no further importation of British or Mexican dollars would be permitted while the new Straits dollar would be imported as rapidly as the Government arrangements would admit. There would be no export of the Straits dollars allowed. And so the natural annual export flow of bullion would carry British and Mexican dollars out of the Malay Peninsula while the new Straits dollar would supplant them just as rapidly. Then when the currency area was sufficiently occupied by the Straits dollar, demonetisation of the other coins would follow, and the coinage of the new dollar would cease. Only now would the Straits dollar begin to rise in value and, at a suitable stage in that advance the Government would declare its relation to the sovereign." What will that be? is a pertinent question that has been put by our Southern contemporary, in answer to which it remarks that recent fluctuations in exchange prove that one-and-eight pence is much too low. A fairly high value would have eventually to be fixed so as to reduce to a minimum the risk of the silver value of the new coin at any time becoming greater than its nominal value. In such an event the gold standard would vanish. A two-shilling rate would be roughly, 25 per cent. above the present intrinsic silver value of the dollar. The Indian rupee, at one-and-four pence, is about 80 per cent. above its silver value. It would be doubtful if 25 per cent. would be a sufficient margin of safety for the protection of the new Straits dollar, as a token coin. And it is not impossible that it might be found ultimately necessary to make it as high as two-shillings-and-six-pence. As regards the time within which the gold standard becomes effective, if it is unduly prolonged the matter might be expedited, at the suggestion of the Committee, by establishing a gold reserve, and in any case they think that the profit made on the coinage of dollars after the establishment of a gold standard should be set aside as a gold reserve, the whole, or any portion of it being, if thought desirable, invested in gold securities. We have heard it asked: Out of what fund is the gold reserve, in the first instance, to be formed? We confess our inability to discern the source of the reserve, and it may be well that the obscurity be elucidated in order to clear up the only point of perplexity with which the plan for the achievement of conversion seems, in our opinion, to be beset present obstructed. As to the gold reserve to be established out of the coinage profits, the recommendation is no novel one to Hongkong, in so far as an identical safeguard has been made for adoption in the Colony, the gold standard being extended to it. In the Straits as in Hongkong the principal opposition to any change originated with the banking class. This attitude

of the representatives of the exchange houses is not to be wondered at. We have more than once, in connection with the discussion of the present economic problem, referred to the motive prompting their opposition; it is that their interests may be adversely affected, and consequently their criticism of a change must be accepted in the light of self-interest. In thus remarking upon the attitude taken up by the bankers, it may be well for us to recall a very notable exception amongst others in the person of Mr. T. H. Whitehead, who, it is fortunate, was called as a witness before the Committee. The consistent stand which he made in the Legislative Council against the Colony incurring gold obligations when its revenue is wholly in silver and his prophetic prediction as to the depreciation of the white metal is too fresh in the minds of our readers to need any reference to them. The powers that be in Downing Street in spite of repeated warnings forced upon the ratepayers a gold loan, the cost of which should serve as a lesson to the Colony against lending a deaf ear to the wise counsels of practical economists whose interests happen to be dissociated from the question at issue. Singapore may be said to be passing through a phase of an economic ordeal and if the Settlements is taken successfully through it, we trust the time may come for Hongkong to grasp its own situation and with unflinching courage face a change from the present unsatisfactory condition from which all *bona fide* merchants and traders can find no remedy.

LOCAL AND GENERAL.

A serious outbreak of smallpox is reported from Leicester.

Keep your eyes open for C. E. LeMunyon's locals.—*Advt.*

The Teylon Pearl Fishery has closed and the total yield to Government is eight and a quarter lakhs of rupees.

The Government contract with the B. I. S. N. Company has been extended for a period of ten years for carriage of military stores.

The Ceylon tea exports to Russia have fallen from 26 lakhs of pounds in the first quarter of last year to 14 lakhs of pounds this year.

Signor Marconi and a number of Copenhagen financiers have arranged for the transmission of ethergrams between Iceland and Scotland.

The German Asiatic Railway Company has been incorporated, with a nominal capital of £500,000, for the construction of Chinese State railways.

The American Press, reviewing recent developments in connection with the Manchurian difficulty comments with severity upon Russia's shameful mendacity.

The Chinese have decided to open stores in Moscow for sale of their manufactures. They will employ Chinese assistants, for whom they will have a house built, with Chinese home comforts.

Watch for C. E. LeMunyon's locals in this paper in a few days.—*Advt.*

The French barque *Du Couedic* (1731 tons), which sailed from San Francisco for Sydney on December 24, with a full cargo of wheat, has been re-insured at the rate of 87 guineas per cent.

Mr. J. P. Morgan's Shipbuilding Trust has secured control of the world-famous yards of Messrs. W. Cramp and Sons, Ship and Engine Building Company, Philadelphia. The trust will manage the yards as a subsidiary company.

Sir Marcus Samuel, Lord Mayor of London, has opened the Baltic Mercantile and Shipping Exchange in St. Mary Axe, E.C. The building is said to be the handsomest and most complete Exchange in the world. It was erected at a cost of £500,000.

The Most Farm mystery, which has created so much interest throughout England, is nearer its solution. According to a late cable a woman's body, which up to the present has not been identified, has been found buried in a filled-in ditch on the farm.

Professor Pickering, of Harvard Observatory, Cambridge, U.S.A., proposes the formation of a trust representing all the observatories in the world. His central idea is to work the various establishments without waste, and to provide money and men where such are needed.

C. E. LeMunyon has an announcement to make to you very shortly; watch for it.—*Advt.*

A DISPATCH from Rostov, on the Don, says that great fears are entertained for the winter-sown cereals owing to the slight snowfall. The last sowings have had a drop of moisture; there has been no rain. The wheat is yellowing under the destructive influence of morning frosts.

A NEW YORK cable of 13th inst., says there is an alarming spread of the bubonic plague in China. The scourge is said to be raging throughout the interior as well as in the coast cities. It seems strange that no news of such a state of affairs has been received either at Hongkong or Shanghai.

READERS of the *Hongkong Telegraph* who have not secured a copy of the complete report of the Straits Currency Commission are reminded that it is reprinted in *extenso* in the *Telegraph* mail supplement and can be had on payment of 25 cents. Subscribers to the daily issue have, of course, received their usual copy.

PRESIDENT Roosevelt has arranged for the United States squadron in European waters to be present at the coming German naval celebrations at Kiel. The new departure is a consequence of German indignation at the announcement that the United States squadron would visit the German coast to greet President Lobbes on his return from Algeria.

THE BEER to drink in the tropics is the Beer made in the tropics—SAN MIGUEL.

Keep track of C. E. LeMunyon's locals.—*Advt.*

THE German Mail of the 15th April was delivered in London on the 15th inst.

COUNT Zeppelin has abandoned his air-ship experiments, which have cost him 1,000,000 marks.

THE re-imposition of quarantine measures at Shanghai against vessels from Hongkong is being once more considered by the port authorities, says the *China Gazette*. Plague is also bad at Amoy, it adds.

MR. Lacock had three Indians before Mr. F. A. Hazeland for disorderly conduct and creating a row at Quarry Bay shipbuilding yard. In view of the recent fracas resulting in the death of an Indian, they were each sentenced to pay a fine of \$25.

A VERY successful benefit concert was tendered to Miss Florence Adelaide at the Theatre Royal on Saturday evening. The place was completely filled, and many well-known theatrical artists of the Colony contributed to a capital programme.

THE Committee of the Kwan Si Famine Fund are going to meet Mr. C. Clement in the Chamber of Commerce room on Wednesday at 5 p.m. when he will be asked to make some remarks on the condition of affairs in the famine stricken districts. The public are invited to attend.

AT the offices of the Public Works Department this afternoon, Garden Lot No. 20, adjoining Island Lot No. 1,529, Conduit Road, was offered for sale by public auction. The lot has an area of 3,000 square feet, with an annual rental of \$6, and the upset price was \$150. Dr. Bateson Wright D. D. was the only one present, and he secured the site for the sum of \$170.

AT a special meeting of the Shanghai *Mercury* L.T. it was decided to increase the Capital to £10,000 by the creation of 700 new shares of £1.50 each in order to buy out the German Printing Office (which Messrs. Arnold Karberg have failed to carry on at a profit), for \$39,000, a German director being added to the Board of the *Mercury*. The Chairman stated that the new shares had been applied for three times over.

PROFESSOR Schneider, a Berlin chemist, after travelling through Australia, induced several tinsmiths to use sodium made from eucalyptus oil, mixed with sulphur and charcoal. The method of treatment is to evaporate the sodium over alcohol, lamps, the vapour thus caused being inhaled by the patient. The result of the experiments conducted at the hospitals is that 60 out of 100 cases of tuberculosis thus treated were cured.

THE report of the Royal Commission upon physical training in Scotland has been issued. The commissioners emphasise the various shortcomings in the matter of such recreations as are provided for Scottish children, and make many recommendations. The proposal is made that lads of known Hooligan (harrikin) tendencies should enter continuation schools. Another proposal is that provision be made, as a last resort, for the State feeding of children.

IT is reported that Mr. Pierpont Morgan, the American millionaire, is about to take a trip to the East, accompanied by Mr. Griscom, the father of the U.S. Minister in Tokyo, and two Russian millionaires. They will leave Vancouver in the early part of next month and are expected to arrive at Japan via Alaska, Kamchatka and Vladivostok. The object of their trip is said to be inspection of the line of the East Asiatic railway, which is now under contemplation.

THE London correspondent of the *Birmingham Post* writes:—After consultation with the Imperial Government, the Viceroy of India intends, I understand, to create at Calcutta a special department for dealing with all Chinese and Korean matters. The department, besides having very considerable administrative duties, will also be something in the nature of an academy for the training and instruction of officers in languages and dialects and all other subjects likely to be of service to political or military authorities in their intercourse with the Chinese and Koreans. Special attention will also be given to the making and preserving of maps and other topographical records of the countries concerned.

SPEAKING at a Primrose meeting last month the late Mr. R. W. Hanbury (President of the Board of Agriculture) declared his belief that the period of the Empire's expansion was now drawing to a close. Mr. Hanbury considered that the *World Trade* would furnish the keynote for the future policy of Great Britain, and the time was, he thought, fast approaching when the British people would not depend so much upon the foreigner for food and raw material as had hitherto been the case. The British Empire was, moreover, so wide that the people must depend less upon the land of birth and wealth who had governed them in the past, and more upon men of talent and merit, wherever found.

Watch C. E. LeMunyon's announcement in this paper.—*Advt.*

CRIMINAL SESSIONS.

The May Sessions were opened this morning at the Supreme Court before Sir Henry S. Berkeley, K.C. (Acting Chief Justice). Six cases on the calendar consisted of indictments for a murder, manslaughter, armed robbery, and perjury.

The first case was that of Ho Wing and Wong Ping, the master of No. 205, Queen's Road West, and his wife, who were charged with ARSON.

In respect of a fire which occurred at the premises on the 18th April.

Prisoners pleaded not guilty and were undefended. The Hon. E. H. Sharp, K.C., Acting Attorney General, instructed by Mr. F. B. L. Bowley, of Messrs. Deans and Bowley Crown solicitor, prosecuted on behalf of the Crown.

The following jury was impanelled:—Messrs. J. M. A. Thiesen, W. J. Hill, I. Cruickshank, J. A. T. Plummer, F. Dow, H. A. Lammert and J. A. de Camargo.

After a lengthy hearing the prisoners were found guilty, and sentence of seven years' imprisonment with hard labour was passed on the man and three years' imprisonment with hard labour on the woman.

THE "BENARTY"

News has been received at Kobe by Messrs. Sheehan, Tomes & Co., agents of the American Asiatic S.S. Co., charterers of the *Steamship Benarty*, that the ship was refloated on the 7th inst., without having sustained damage, so far as could be ascertained that day.

ASK FOR ASAHI JAPANESE BEER—G. Girault.

THE STRANDED "VICTORIA"

NAVAL INQUIRY AT CHEFOO.

The British Consul summoned a Naval Court to assemble at the Consulate on the 4th inst. to inquire into the wreck of this vessel, and into the conduct of the master and crew.

The Court consisted of the Consul, as President, assisted by Captains Robinson (*Nanchang*) Scott, and Somerville (*Wuchang*).

The principal witnesses examined were the master and chief mate, whose certificates were handed into the custody of the Court, pending the hearing. The evidence of these two gentlemen was strongly corroborative, and showed, briefly, that the vessel was properly manned, supplied with charts, and all necessary gear, and was navigated as skillfully as their experience and judgment suggested.

In cross-examination they both admitted that they had never been in the Gulf of Pechili before; that they were going at a considerable speed through a thick fog; and that they did not cast the lead very frequently. On the other hand it seemed clear that the stranding was purely accidental, and that, all hands worked strenuously to do their best to get the vessel off afterwards.

After hearing the evidence the Court retired to consider their judgment and at a quarter-past-six it was announced by the Consul in the presence of the parties interested. The Court found that the master was deserving of censure on the points above-mentioned, which were termed errors of judgment, but did not think it necessary to deal with his certificate. They fined the master £80, the costs of the inquiry, and thereupon returned their certificates to the master and mate.

The master thanked the Court for having given him a very fair hearing.

FORTHCOMING ENTERTAINMENT.

It will be seen on reference to our advertisement columns that Alva, the Great announces performances in Hongkong commencing at the City Hall next Saturday. He comes to the Colony with exceptionally good credentials as a magician, spiritualist and ventriloquist, and should have no difficulty in filling the Theatre during the five nights upon which he performs. He and his company arrived in the Colony this morning, after having had a most successful tour in India and the Straits Settlements where the performances were spoken of in flattering terms. The up-to-date spiritualistic sea, which is reported to be a mysterious and wonderful performance, will introduce to the audience "The Girl with the Black Hair," who, we understand has been drawing crowded houses further south. Then there is Mde. Reux, a thought reader, and many other interesting "turns," which ought to afford ample amusement to Hongkongites.

THE "PEMBROKESHIRE"

FOREHOLD FULL OF WATER.

As reported in the *Telegraph* on Saturday last, the *Shire steamer Pembroke* is ashore at the Saddles. The *China Gazette* of the 14th inst., says:—

The s.s. *Pembroke*, Captain Liddell, which left here for New York on Monday with about 1,500 or 1,600 tons of cargo, has gone ashore pretty badly on the North Saddles. The Agents, Messrs. Sheehan, Tomes & Co., received a telegram last night asking for pumps, tugboats and lighters to be sent down, and accordingly the *Rock* and *Fukler*, with two cargo boats in tow and pumps from Farnham, Boyd & Co., went down to the aid of the stranded vessel which will be lightened before any attempt is made to get her off.

LATER.

We understand that news has been received in the Colony to the effect that her forehold is full of water.

GOLD STANDARD FOLLOWS PARITY.

A cablegram, dated New York, 13th inst., says:—

It is announced by the Bureau of Insular Affairs that there is to be no Philippine gold standard until the parity is established. This is generally interpreted to mean that the Philippine peso will not be redeemable in gold so long as the Mexican peso continues to be receivable at varying rates of exchange. It is pointed out by those who have discussed this phase of the matter that if any other course were pursued it would allow undesirable speculation. By the terms of the Act the new peso is to be receivable in circulation when five millions shall have been coined and ready for circulation and shall be given a preference in the public offices of the government for all public dues. It is also provided that the present silver coins shall continue in circulation until not earlier than January 1, 1904. Until the Mexican currency is retired or such time as the legal parity is reached, it is understood from the ruling at Washington the gold standard will not go into effect.

THE PLAGUE.

During the forty-eight hours ended at noon to-day 22 further cases of bubonic plague, making 678 since January 1st, were reported. Eight of the cases were fatal. For the week ended 16th inst. there were 117 cases with 99 deaths.

SHIPPING AND MAILS.

MAILS DUE.
German (*Stuttgart*) to-morrow.
Indian (*Kunwar*) 21st inst.
Canadian (*Empress of China*) 29th inst.
Australian (*Chinglu*) 5th prox.

The A. L. S. N. Co.'s s.s. *Vindobona* left Singapore for this port on 15th inst.

The C. P. R. Co.'s s.s. *Tartar* left Yokohama p.m. on 16th inst. for Victoria and Vancouver.

The Ben Line s.s. *Bentham* from Antwerp and London left Singapore on 16th inst. for this port.

The B. T. B. Co.'s s.s. *Hyades* sailed from Yokohama for Victoria and Tacoma, on Saturday afternoon 16th inst.

The Imperial German Mail s.s. *Preussen* left Genoa on 17th inst., at 5 a.m., and may be expected here on 13th prox.

The C. N. Co.'s s.s. *Titan* from Kobe left there for this port on 15th inst., and is expected to arrive here at daylight on 20th inst.

The P. & O. S. N. s.s. *Chuen* left Singapore for this port on 17th inst., at noon, with the *Quilward* English Mails, and is due here on 22nd inst., at about 7 a.m.

The C. P. R. s.s. *Empress of Japan* arrived at Shanghai at midnight 15th inst., and left at midnight 16th inst. for Nagasaki where she is due at 6 a.m. 18th inst.

TELEGRAMS.

(Reuters.)

The Duty on Tea.

LONDON, 15th May.

An influential deputation will wait on Mr. Balfour and Mr. Ritchie to urge the remission of a portion of the duty on Tea instead of the abolition of the corn duty.

LATER.

Mr. Balfour has declined to modify the duty on Tea.

The Strike in Melbourne.

The strike in Melbourne is ended.

The Near East.

The Bulgarian Government has sent a note to its representatives abroad requesting them to call the attention of the Powers to the excesses of the Turks in Macedonia, which render useless the efforts made by Bulgaria to restrain the Macedonians.

Russia.

There is a marked recrudescence of anti-semitism in Russia, where the old expulsion ordinances are being enforced. Thirty-seven thousand Jews have been forced to quit Kieff, and a reign of terror exists.

The Education Bill.

16th May.

A compromise has been effected in the Education Bill and the Government has agreed to an arrangement reducing the number of Borough Councillors and giving the County Council an absolute majority.

Mr. Chamberlain on Free Trade.

Mr. Chamberlain speaking at Birmingham said he strongly condemned the interpretation of Free Trade, which prevented Britain from favouring her Colonies or from retaliating against countries penalizing the colonies for favouring Britain; the country ought not to be bound by any technical definition of Free Trade so far as fellow-subjects were concerned. We should not hesitate to retaliate whenever the interests between the colonies and ourselves were threatened by others.

LATER.

Mr. Chamberlain's speech is regarded as marking an epoch in the fiscal relations of the Mother Country and the Colonies and as raising the issue whether a wide-world free trade accords with the country's best interests.

Morocco.

The Moorish troops sent to Tetuan in an English steamer have entered the town unopposed; the rebels are demoralized by heavy losses and the garrison now assumes the offensive.

(N. C. Daily News.)

Securing the Nile.

London, 14th May.

It is stated at Brussels that an arrangement has been concluded whereby Great Britain will reoccupy the Lado enclave.

King Leopold renounces all claims to acquire any land on the banks of the Nile, and receives as compensation a part of the Bah el Ghazal.

The Nile thus becomes wholly Anglo-Egyptian.

OVERCROWDING IN THE COLONY.

MEETING OF PROPERTY OWNERS.

At three o'clock this afternoon a meeting of owners of property in the Colony was held in the Sanitary Board offices for the purpose of considering the sections of Ordinance No. 1 of 1903 (Public Health and Buildings), relating to overcrowding and the requirements to be observed with regard to cubicles or rooms in existing buildings. The two sections of the Ordinance are numbered 46 and 154, respectively. The meeting was closed to the Press.

THE NEW VICEROY.

The *Sin Wan Pao* states that Tsen Chuah-suen, late Viceroy of Szechuen and Viceroy Designate of Kwangtung and Kwangsi is a native of the latter province, therefore his appointment to the Viceroyalty of the Two Kwangs is a special one and has few precedents. After the issue of the Imperial Edict appointing him, the Grand Councillors further at the special request of the Empress Dowager telegraphed to the said Viceroy stating that the military operations in Kwangsi are in a precarious condition while robbers fill the province and some have even appeared in Wei-chow and Chinchow of Kwangtung and as he (the Viceroy) is a native of Kwangsi he must have a good knowledge of all the conditions in that Province and will consequently be able to accomplish good results. He should further with the cooperation of the Governor of Yunnan, Kueichow and Kwangsi exterminate the robbers. Again the civil and military systems of the Two Kwangs have been most corrupt, he should do his best to cause a total reorganization, etc. Viceroy Tsen replied by telegraph that as he had not personally been to the scene of the disorders he would not like to make rash statements but asked that he be allowed to proceed to his new post at once and to take ten able officials of Szechuen to assist him in the south. He further asked to be allowed to borrow Tls. 20,000 from Szechuen and to have a temporary wooden seal made to be used en route. It is said that the Government has consented to the above application and that he will arrive at Kwangtung about the middle of the present month.

ASK FOR ASAHI JAPANESE BEER.

THE KWANGSI FAMINE.

The *Sin Wan Pao* publishes a telegram sent the other day by Governor Wang Chihchun of Kwangsi to Treaty Commissioner Lu at Shanghai. The telegram says "Kwangsi has always been a poverty-stricken Province and when I arrived here, I found matters were in a most dilapidated condition, robbers simply swarming the province, therefore it was difficult to decide where to begin operations. I had to work hard to recruit troops and acquire funds and for nine months I was daily in the midst of battles. Fortunately now the interior and the districts on the borders have been pacified and I have memorialized the Throne to this effect. At present on one hand I am keeping the troops to capture the remaining robbers (rebels), while on the other hand I am instructing the subprefects and Magistrates to inaugurate militia within their jurisdictions for self-protection. Although I had a most difficult and laborious task I am glad that it has borne some good results, but the different newspapers intentionally publish false reports to deceive the people which I have no intention of publicly denying but as they might wrong you, I respectfully send this message."

BISHOP OF HONGKONG

ADRIAN ON A PADDY FIELD.

The following interesting item is from the *Foochow Daily Echo* of 9th inst.:—After a day of intense depression, Thursday night at and in the neighbourhood of Pagoda Anchorage at any rate, turned to be one of the stormiest and roughest in our recollection. Commencing at 4.30 p.m. with a squall and thunder-storm, a gale from the N.E. followed. Two Ningpo junks laden with rice turned turtle within sight of the s.s. *Hallan* at about 6 p.m. and at a later hour a vast quantity of wreckage was seen floating down the river. Those leaving the Anchorage for Foochow in the two finest steam-hungers on the river, one starting at 6.30 and the other at 8.30 met with terrible experiences, while the Bishop of Victoria sailing up the river in a house-boat with Rev. J. Martin, was driven on to a paddy field and found himself on the fall of the tide thirty yards from the bank; and here he spent the night, to be taken off in the early morning by a small sampan in which he continued his journey to Foochow. It is thought that the storm must have been a sort of local cyclone as the wind at Foochow at 10 p.m. was blowing from the west. In consequence of this storm neither cargo nor native passengers could be got down to the *Hallan* and the departure of the steamer was delayed for 24 hours.

MORRISON HILL GAP.

It will be remembered that at a meeting of the Sanitary Board held on the 18th February last, a communication was read from Mr. Ho Tung as owner of certain properties situate at Morrison Hill Gap. It was stated in the letter that a number of tenants, occupying a block of some fifteen European dwelling houses, complained of the unhealthiness of the locality on account of the prevalence of fever of a malignant type owing to the presence in that neighbourhood of breeding places wherein the anopheles mosquitoes abound. In the opinion of a medical gentleman the main contributing factor in rendering the houses unhealthy was the presence at the rear of the Sikh temple of a marsh and a nullah situated to the south of the building. The close proximity of such breeding places naturally led to the presence of mosquitoes in considerable number.

In an investigation that had been made it was found that the servants suffered severely from fever before the Europeans were attacked. It must be noted that the servants' quarters about directly off to the nullah. Dr. Clark, who visited the neighbourhood, advised the Board to recommend the Government to surface the bed of the nullah, and to cut down the brushwood on the south side of the nullah (below the Mahomedan Cemetery) and to fill up the small swamp at the back of the Sikh temple. These recommendations, it may be noted, are generally those carried out in respect of any district in which the malarial mosquito pest is known to exist. Pursuant to these recommendations and to the Government's determination to rid the Colony of the principal factor in the causation of malaria, we now learn that the Mahomedan Cemetery authorities, at the request of the Sanitary Board, have cleared away the brushwood from the cemetery. The training of the nullah in the locality cannot yet be undertaken, but remedial steps in connection with this nullah have been taken by the mosquito gang. It is believed that, after these measures which are now completed, the bad reputation attached to Morrison Hill as a fever-stricken district will be removed, and residence in the locality may again be taken up without apprehension.

LOCUSTS AND FLEAS ON THE WEST RIVER.

Native reports to hand state that for the last few days the villages along the West River have been visited by a plague of locusts and fleas, which has done a great deal of harm to mulberry and other crops. It is feared that the damage committed will be a death-blow to the silk cocoons. The presence of the fleas at this time of the year is also very curious. Victims attacked state that after a bite, the part of the flesh becomes very irritated, and a large lump rises on the skin while the person bitten feels languid and is very thirsty. The Chinese ascribe the presence of the fleas to a new phase of the "black death," or plague, for they state that about seven years ago, the same type of fleas was the forerunner of the plague.

ASK FOR ASAHI JAPANESE BEER.

THE SUGAR CONVENTION.

BRITISH SUGAR EXPORTS TO THE FAR EAST.

Diplomatic correspondence upon the ratification of the Brussels Sugar Bounties Convention was issued as a Parliamentary paper on 7th ult. It is concerned with the position of the British self-governing colonies. The British Government instructed their Ambassadors to explain to the other Powers that they would not consent to be bound to penalise bounty-fed sugar imported into England from any of the self-governing colonies, neither would they accept any reference of the question to the permanent Commission to be established under the Convention. A paper has also been issued giving a list of countries engaged in the production of sugar, together with value of exports from the United Kingdom to each of the said countries. The following figures relate to countries in the Far East. The figures show the value of total exports from the United Kingdom:—

Countries.	1897.	1898.	1899.	1900.	1901.
Dutch East	2,709,355	2,150,510	2,411,040	2,881,001	2,362,768
French Indo-China	73,599	76,874	81,889	68,079	105,066
Siam	154,252	215,440	196,111	205,221	237,225
Philippine Islands	474,133	329,511	428,635	1,000,750	913,875

COMMERCIAL.

TO-DAY'S INTELLIGENCE.

The only item of interest to report is the putting through, locally, of a large lot of Indo-China, reported to be a thousand shares, at \$104, \$104.50, and \$105. Shanghai is said to be buying to cover "shorts." The closing quotation is \$105 to \$105.50, buyers. If shares offer \$106 may be paid. Nothing doing in other stocks.

RAUB REPORT.

The general manager's report to 25th April, is as follows:—Gentlemen,—I beg to submit my monthly report on your mining and milling operations. The mine measurements, prepared by the mine manager, show a total of 503 for the period (4 weeks), under review, made up of 41 ft. sinking, 291 ft. driving, and 171 ft. cross-cutting, as against a total of 551 ft. for the previous 4 weeks.

MINES.

Bukit Koman, Main Shaft.—The station sets at the 340 Level, the dividing timbers from the 240 to the 340 Level, and the cage road down to the last named have been completed; the flat sheets and tram lines have been laid in the bottom level, and the cages and trucks are now in constant operation. Below the 340 Level special sets have been put in to cope with any possible requirement in the future, and the shaft has been closely timbered. This work has been forced, so that sinking could be resumed. To this latter, an addition of 3 ft. has been made, so that the shaft is now 22 ft. in all below the 340 Level. The water has increased, and will hamper the work somewhat, until the extra pump shall have been fixed, preparations for which are well in hand.

340 Level, Drive North.—This has been advanced 15 ft., making 23 ft. in all. The lode 42 in. wide and worth 3 dwt.; the value is not so high as last month, the lode is greatly improved in appearance.

Do., Drive South.—Here 18 ft. have been added, bringing the total to 62 ft. south of the shaft. The lode, 56 in. wide and worth 6 dwt. per ton, is a fine body of stone and promises well.

Work in the above two drives has been slightly interrupted by that in connection with the station.

240 Level North, No. 1 Winze.—To this has been added 1 ft., making the total depth 64 ft. Owing to the occurrence of an accident and to the superstitions of the Chinese miners, operations here have had to be temporarily suspended.

240 Level South, No. 2 Winze.—This has been sunk a further 6 ft., bringing the total depth to 66 ft. This being deep enough for connecting with the 340 Level when it shall have been so far advanced, the work has been stopped. For the whole depth sunk through the lode has averaged 48 in. wide and has been chiefly low grade, but with decided improvement at the bottom.

140' Level North, Drive North off No. 2 Winze.—An advance of 6 ft. makes this total 33 ft. The lode averages 15' wide and is worth about 1 dwt. It has improved since last reported on.

140 Level South, Drive South off No. 1 Winze.—This has been prolonged 12 ft., and the drive on the hanging wall branch of the lode now totals 14 ft. The lode is 48 in. wide and worth about 1 dwt., which is a falling off.

Do., Drive South off No. 3 Winze.—To this has been added 25 ft., making a total of 37 ft. The lode is 36 in. wide and is worth about 2 dwt., indicating an improvement.

Do., Cross-cut East into Koman Hill.—This now reaches 224 ft., making 31 ft. advance for the month. The ground has become much softer, and is letting out a little water.

Do., Drives from East Crosscut.—The lode referred to last month has been driven on for 15 ft. south and 5 ft. north. It averages 33 in. wide and gives 1 to 3 dwt. The quartz is very much more mixed with slate than is usual with these lodes.

Tunnel in Koman Hill Extension Eastwards.—This has been further prolonged 30 ft., making a total of 333 ft. East of the main lode, with no change. Between this point and the end of the East Adit there is yet 35 ft. to be driven to prove the whole of Koman Hill, in this part. This should be accomplished early in the coming month.

Do., Cross-cut West from North Drive.—Here we have added 36 ft., making a total of 56 ft., with no fresh developments.

ASK FOR ASAHI JAPANESE BEER.

East Adit.—An addition of 56 ft. has brought this up to 340 ft. It shows nothing new.

Do., Drive North.—This end has been driven 56 ft., making a total of 130 ft. The lode is 49 in. wide and is worth 3 dwt. per ton. It now contains more iron-stained matter, and some good pannings have been got from it during the month. Altogether it looks most promising.

Do., Drive South.—An advance for the month of 86 ft., makes this total 154 ft. The end is getting into shallow ground and, as the persistence of the lode has now been thoroughly proved, it is not necessary to proceed further with this drive. The lode for this distance has averaged 24 in. wide with a value of a little over 1 dwt.

Eastern Prospect.—After extending this to 86 ft., making the distance driven for the month 22 ft., the value of the stone was satisfactory that driving was stopped, and crosscuts were started East and West. The former has been driven 11 ft., and the latter 2 ft., but nothing of note has yet been met with.

Stopes.—We are winning stone from the following stopes:—

Above the 240 Level North: 3 stopes; lode averages 63 in. and 2 dwt.

Above the 240 Level South: 2 stopes; lode averages 34 in. and 2 dwt.

Intermediate North: 2 stopes; lode averages 84 in. and 5 dwt.

Intermediate South: 1 stop; lode averages 60 in. and 4 dwt.

140' North: 1 stop; lode averages 70 in. and 5 dwt.

At the 340 Level from the drives and backs of the drives broken for timbering, above 150 tons of quartz have been raised. The lode averages 48 in. wide, and from panning tests is worth fully 6 dwt. per ton free milling.

General.—Winding and pumping plant have been overhauled where necessary and, are working satisfactorily.

Bukit Hitam 260 Level, Drive South.—This has been advanced 9 ft., making a total of 244 ft. The lode continues small and of low grade, averaging only 44 in. in width and 1 dwt. in worth.

Do., No. 1 Winze.—Here 31 ft. have been sunk, making the depth to date 48 ft. The lode matter averages 15 in. wide and has a value of about 1 dwt. Its appearance so far is not encouraging.

Do., Drives over back of Level.—Of this work 18 ft. have been done to leave an arch of ground over the back of the level above the No. 1 winze. The lode exposed averages 8 in. wide and is worth about 3 dwt.

Do., Crosscut to No. 1 winze.—The object of this was to connect the stope in the back of this level with the No. 1 winze from the 160, so as to get waste rock through into the stope for filling; 5 ft. served to connect these points.

Stopes.—The following stopes are in operation:—

Above 260 South: 2 stopes; lode 36 in. wide, value 11 dwt.

Above 160 North: 1 stop; lode 39 in. wide, value 4 dwt.

Above 160 South: 1 stop; lode 45 in. wide, value 4 dwt.

General.—One boiler has been under repairs the tubes leaking badly; the second boiler was brought into use without any cessation of work. The engine and pump are running much as usual.

Milling Return for 4 weeks to 25th April, 1903.

Period of works.—28 days, less lost time 2.81 days for whole mill due almost entirely to repairs and cleaning plates.

Ore milled.—B. Koman 2,540 tons.

B. Hitam 823 tons. Total 2,322 T.

Mill duty.—2.9 tons p. stamp per 24 hours.

Amalgam Yield.—2,158 oz. giving 732.5 oz. melted gold, 33.94%.

Bullion Yield.—505 dwt. per ton milled=72.70% contents.

Mercury Loss.—2.73 lb. per 100 T. milled=1.58 oz. per oz. bullion.

Concentrates saved.—Blanketing, 26 tons (80% weight), assay 19.71 dwt.=175 dwt. per ton milled. Buddings, 82 tons (8% of weight), assay 9.07 dwt.=754 dwt. per ton milled. Total 3697 weight=429 dwt. per ton milled=6.22% of contents.

Tailings.—assays 1.51 dwt.=1.454 dwt. per ton milled=21.08% of total contents.

Estimated cost for 4 weeks ending 25th April, 1903.

REPORT ON THE CAUSES AND CONTINUANCE OF PLAGUE IN HONGKONG.

(Continued.)

6. Apart, however, from the exposure of the Colony to re-infection from the mainland of China, plague is now endemic in Hongkong. Since 1898, no two consecutive months have been free of plague, and there has been a yearly recrudescence in the spring which gradually increases in epidemic force until it reaches its climax in June or July, and then rapidly decreases.

This endemicity owes its maintenance to:

(a) Infection among rats, probably often connected with infectious material in rat runs or in houses, the virus of which has not been destroyed;

(b) Retention of infection in houses which are rat-ridden, or which have escaped disinfection because of the plague patient who occupied the house having been taken to China or dumped when dead or dying into the street, or which could not be efficiently disinfected, because of the darkness and insanitary condition of the infected house; and

(c) Infected clothing of people who have been ill or who have died of plague, and whose effects have been removed to some other house without disinfection.

On the other hand, the recurrent outbreaks and epidemic prevalence are favoured by:

(a) The seasonal heat and moisture of the spring and early summer.

(b) The movement from place to place of infected rats and persons.

(c) The general insanitary condition of the interior of a great number of the Chinese tenement houses, the rooms of which are dark, damp, badly ventilated, and grossly overcrowded.

(d) The high proportion of the population which is poor, living in tenement houses, and whose habits, dwellings, persons, and mode of preparation and storage of food are not at all cleanly; who at the same time are not permanent residents, and whose susceptibilities to endemic diseases are accordingly greater than those of a more residential population.

New comers are specially prone to plague when freshly exposed to infection in insanitary houses.

7. The social scale and floating nature of the population, like the seasons, are not alterable. They are mentioned as subsidiary influences because their recognition as agents fostering an epidemic is not without its uses, inasmuch as it draws attention to the special localities and classes of population most likely to be attacked, to the movements of these classes, and to the time to prepare for an outbreak.

8. As in Capetown, so it has proved in Hongkong, that nearly always there is an infection of the locality by infected rats, before cases of plague occur among human beings, and it was by the organization of a daily bacteriological examination of the rats collected in different parts of the town and subsequently taking prompt action thereon whenever infection was found, that some of the worst localities were kept comparatively free of plague. The practice thus instituted was not to wait for plague to occur in human beings but to take action in advance and deal with the precursors of plague.

9. The circumstances which have contributed to the erection of insanitary houses are explained in the preliminary reports submitted to the Government of Hongkong, and a more detailed description of the defective mode of construction is given in the conjoint report by Mr. Osbert Chadwick, C.M.O., and myself. Mr. Chadwick was commissioned at the same time as I, to inquire into the sanitary condition of the Colony, more particularly with reference to the water supply and drainage, and during his stay in the Colony we worked together on the different sanitary problems. The insanitary and overcrowded condition of the Chinese tenement houses is due partly to the limited area of building land which was available in the early days of Hongkong, and partly to the defective mode of construction of the houses and the pernicious subdivision of the rooms into separate dwelling houses for separate families without reference to the free access of light and fresh air.

The Colony of Hongkong was not always the size which it is to-day. At first there was only the Island of Hongkong on which the City of Victoria was built. Later a small strip of the mainland on the opposite or Kowloon side of the harbour was acquired, and it is only within the last four years that the boundary has been pushed back and extended inland so as to include an area of land some 20 miles broad. The conformation of the site on which the City of Victoria stands, with its rapid rise of land near the sea-shore up to a height of some 1700 feet, led in the early days to the erection of houses on the small strip of land near the harbour, and extending some distance up the hill, these houses being separated only by narrow lanes and alleyways. At the time when the population was small, and the houses were heightened, and the rooms subdivided into cubicles without windows, in order to provide for the rapidly increasing population, a dangerous concentration of population to the extent of 600 to 800 persons per acre resulted, and the areas and the houses so treated have become extremely insanitary. It is chiefly in the City of Victoria that these conditions exist, but even in Kowloon, with wider streets, the tendency to provide insufficient air space between the backs of houses, and to continue the sub-division of rooms into cubicles without windows, is common.

10. The experiments undertaken demonstrate that pigs, calves, sheep, hens, ducks, geese, turkeys, and pigeons are, in addition to rats, susceptible to plague, and particularly so when fed with plague material.

The Chinese have generally maintained that these animals and birds suffer from plague, and evidently their observation, as in many other instances, is correct, though their theories as to causation need not be considered.

That these animals of the farmyard and of the backyard of domestic dwellings are affected with plague is an important fact bearing on the continuance of plague in some localities where these animals are numerous; while the fact that they take plague by feeding has to be borne in mind in any future consideration of the different modes by which the virus of plague gains an entrance into the human body. The view that plague is mainly acquired by inoculation will probably have to be modified in the light of these experiments, and the swallowing of infected food or drink, in whatever way that food or drink may become infected, will have to take a more important place in the recognised modes by which the virus infects the body. More attention than has hitherto been considered necessary will require to be paid by the local authority in times of plague epidemics to the examination and inspection of the food supply

a thorough knowledge of Chinese and speak and understand English, more early and reliable information is likely to be gathered by them than is possible at present.

This year a Chinese medical man who had been trained in America was engaged to attend the Chinese in the plague hospital, and it was found that several that objected to be removed to hospital no longer objected when they understood they would be attended by a countryman of their own.

13. In addition to the foregoing special organization for plague work under the direction of the medical officer of health, the sanitary administration of the Colony requires to be placed on a wider basis in order that the complicated and urgent health problems which always arise in a thriving and expanding commercial centre shall be economically and successfully dealt with.

Though the trade and population of Hongkong have grown marvellously during the past few decades, yet those who are in a position to form a just opinion are unanimous in believing that the Colony is only in its infancy as regards growth and importance. Merchant, soldier, and sailor, each looking at the future prospects of Hongkong from his own point of view, have confidence in its rising greatness.

It is evident from the condition of Hongkong that the sanitary administration has not been able successfully to cope with the forces which make for deterioration and disease. Since the advent of plague in 1894, much has been done to improve it, but a good deal still remains to make it efficient.

The most noticeable feature in regard to sanitary matters in Hongkong is that no one is responsible. Independence of action by different officers and absence of co-ordination tend to spasmodic action and inefficiency. There is a Sanitary Board and a President, who meet at stated times and discuss public health matters, but their functions are advisory. There is the medical officer of health and assistant medical officer of health for the Colony, whose duties are executive, but there is no administrative head who is responsible to the Government for the conduct of health matters in the Colony and for the maintenance of a continuous and progressive policy.

It is advisable that all municipal health matters be brought more or less under one department, controlled by a sanitary or health commissioner who would be the administrative officer. The more ample work to occupy the whole time of such an officer. In addition to being President of the Sanitary Board he would administer the several branches of the Public Health Department, dealing with the health questions relating to water supply, sewerage, and drainage; alignment and laying out of streets and back lanes; the prevention of the crowding together of new houses, or the formation of new unhealthy areas; the scrutiny of plans of new houses, and the enforcement of compliance with the requirements of health, the preparation of schemes for the consideration of Government in connection with the demolition of insanitary areas, and the reconstruction of sanitary lines; the provision of markets, public latrines, urinals, bath-houses, &c.; and the general enforcement of the Public Health Laws. Lastly, he would be responsible to Government for the efficient working of the Department, and, like the Director of Public Works, should have a seat on the Legislative Council. Mr. Osbert Chadwick, C.M.G., is also strongly of opinion that a Sanitary Commissioner is required.

14. At the request in Council of Sir William Gascoigne, K.C.M.G., the officer administering the Government of Hongkong, Mr. Chadwick and I, assisted by Dr. Clark, the Medical Officer of Health for the Colony, drafted a Public Health Bill which amends and consolidates the Public Health Ordinances of Hongkong. It gives more control over buildings and the laying out of streets, and greater power with reference to the prevention of overcrowding. The principles of the Bill have been in the main accepted by Government and doubtless will soon become an Ordinance.

With this Act in force, and a Public Health Department organized on the basis recommended, with a Sanitary Commissioner as its administrative head, the Government will be able not only to cope with plague, but will be gradually able to improve the sanitary conditions of the Colony and to prevent in the future those conditions arising which have in the past proved detrimental to its health.

I have the honour to be, Sir,
Your obedient servant,
W. J. SIMPSON, M.D., F.R.C.P.
December 22nd, 1902.

PART I.

PLAGUE IN CHINA.

(a) BEFORE THE OUTBREAK IN CANTON IN THE SPRING OF 1894.

1. China possesses an unfortunate reputation for being the source of many epidemic diseases which have invaded the West, but it must be admitted that this evil reputation is based on very slender grounds, as most of the accounts concerning infectious and contagious diseases having originated therein are based more or less on rumour or conjecture. It could not be otherwise, for the immensity and isolation of China have always rendered it a terra incognita.

2. The plague of the 14th century, called in subsequent history the Black Death, which ravaged Europe and which was the most destructive pandemic known in history, was set down by the inhabitants of the West of that period as coming from Cathay. In those days, when most of the trade from the East was overland, the caravans were one of the means of transporting disease from place to place, and it is supposed that the infection of plague was brought in the caravans conveying the merchandise from Northern China along the great northern trade routes between the East and the West. Whether the pandemic of the 14th century began in China and extended thence to the West, or whether it began in India or some adjacent country, there is at present no evidence to furnish an answer. Chinese records, so far as is known, are silent on the subject. From Chinese authorities I gather there is no allusion to any great plague at that time either in Northern or Southern China. Not that any importance can be attached to the absence of entry in the chronicles, because loss of life from disease in China, unless on an enormous scale, is not likely to attract attention and become the subject of record.

In 1346, Southern China seems to have been free of plague in its large centres, otherwise the disease is likely to have been referred to by Ibn Batuta, the great Moorish traveller, who was there in that year, and who on his voyage home met with the plague in Damascus and describes its great mortality in that city.

3. As regards the source of the existing pandemic of plague, there is not the same uncertainty. The disease sprang from Southern China, where it has prevailed in an endemic form for sixty years or more. It is possible to be definite on this point in consequence of a better knowledge of Southern China which is contemporaneous with the free admission of foreigners into the interior, first brought about by the influence of the British. Since the acquisition of Hongkong in 1841, and the subsequent opening of the treaty ports to commerce in 1860, a vast change has occurred in the relationship of China and Europe. In addition to increased trade at the commercial ports a host of missionaries, explorers, and merchants have penetrated into the interior of the country and reached parts which no foreigner had previously visited. They have given accounts of their experience, with the result that, though the interior of China as a whole and its internal affairs are still veiled from foreigners, yet much more is known concerning important events occurring there than ever before. A favourite province for exploration was Yunnan, because of its proximity to Burma, Siam, and French Annam, its reputed richness in minerals, and its possibility of becoming a highway to Western and Central China. The sixties and seventies of the 19th century were remarkable for the number of intrepid travellers who traversed Yunnan and other parts of China. Lagrange, Granier, Cooper, Spry, Sladden, Dupuis, Rocher, Richi, Margary, Grosvenor, Baker, Gill, and later Colquhoun and Bourne, all distinguished themselves as modern pioneers.

4. It was during one of these explorations, that M. Rocher in 1871, i.e., over thirty years ago, came across plague in the Province of Yunnan. This province is situated at the eastern confines of Burma and Tibet, has Tonking on the south, the province of Szechuan on the north, and the provinces of Kwangsi and Kwangtung to the east. It is very mountainous, with high and fertile plateaux, which rise towards the central portion of the province to between 6,000 and 7,000 feet. Talifu and Yunnanfu, two of its chief cities, are situated on the shores of inland lakes and on plateaux, respectively 6,100 and 6,900 feet in height.

5. The province of Yunnan, isolated by its position and its physical features, has only a limited intercourse with its neighbours and with the treaty ports. There are trade routes connecting Talifu and Yunnanfu with Burma, Tibet, and the Province of Szechuan, but the mountainous character of the country which has to be traversed and the cost and difficulties of transport, which has to be effected by pack animals, cause them to be little used. Caravans from Tibet pass Li Chiangfu on their way to Ssumao for tea.

The trend of intercourse and trade, so far as it is developed, is towards Tonking and the Province of Kwangsi, Kwangsi, and Kwangtung, where, following the course of the Red River in Tonking and the West River in Kwangsi and Kwangtung, the journey can be undertaken in boats for at least some part of the way. Both the Red River and West River rise within the boundary of Yunnan, and form more or less natural trade outlets for the province. The Red River is navigable from Manhao in Yunnan, and passes through Tonking to Haiphong in the Gulf of Tonking. This route, notwithstanding its advantages, has not been a favourite. The West River is navigable from Posh, a small town situated on the borders of Yunnan and Kwangsi away down to Nanningfu, Wuchowfu, and Canton. Even this route has been seldom used further east than Nanningfu. Almost invariably, until recent years, Yunnan goods brought down the West River as far as Nanningfu have, at that point, been taken from the boats and carried across country on pack animals to Pakhoi and more recently to Moulik. Similarly, goods intended for Yunnan have entered Pakhoi, been conveyed overland to Nanningfu, been there transferred to boats, taken up the river to Posh, and then overland again to the towns of Yunnan.

There is yet another trade route from Yunnan through the Kwangsi Province. It is more northerly than that by Posh, Nanningfu, and the West River, which it, however, joins before this waterway enters the Province of Kwangtung. The route is overland, and in an easterly direction from Yunnan to Kingiwin in Kwangsi. It here meets the River Lieou Kiang, and becomes a water route to Lauchau, which is a great distributing centre, goods from the west being sent to the Yunnan and Kwangsi Provinces, and vice versa. At Lauchau the route branches into two, one going overland in a north-easterly direction to Kweilin, the capital of Kwangsi, and thence by water due south to Wuchowfu. The other branch is by river, via Taamchau to Wuchowfu.

6. The Province of Yunnan, at the time of M. E. Rocher's visit, was in a state of rebellion. The inhabitants, chiefly Mohammedans, had risen against the Imperial Government, and such was their power that it took some twenty years to subdue them. The traveller found large tracts of the country devastated or deserted, and everywhere signs of depopulation and of the ravages of warfare, great numbers of the inhabitants having been killed in battle, or afterwards massacred. To the miseries of war and of famine were added those of pestilence,

the infection of which was of an carried by the rival armies from village to village and town to town. What proportion of the depopulation of Yunnan was due to fighting, and what proportion to massacres, famine, and pestilence, is unknown, but their combined effect was to convert a populous and thriving province into a country with a few inhabitants, and one which had to be re-peopled by immigrants.

7. That the pestilence was plague there can be no doubt. M. Rocher's description of the disease, and its association with swellings in the armpit, groin, and neck, allow of no other conclusion. His account of the disease is given in the Appendix, with a chart on the Map of Southern China showing the course of the epidemic from town to town in the Province of Yunnan. An earlier but similar account by M. Emile Rocher was translated by Dr. Manson, medical adviser to the Colonial Office, and appears in the "Medical Reports" for the half-year ended 31st March, 1878, published half-yearly by the Inspector-General of the Chinese Customs Service. It will be noted that the first sign of the disease in an epidemic form was a sickness and mortality among rats. How and when plague first came to Yunnan is unknown. It evidently existed there before the Mohammedan rebellion, and it was only the conditions of warfare which brought it markedly into prominence. There are traditions of the infection having been imported from the western frontier of Yunnan, and M. Rocher thinks that it may have been introduced from Burma. Possibly Mohammedan pilgrims returning from Mecca in the early part of the 19th century, when plague was prevalent in Egypt and Arabia, may have introduced it into Yunnan. That this journey was occasionally undertaken is evidenced by the fact that Ma Te-hsing, the high priest of the Mohammedans of Yunnan, and leader of the rebellion, visited Mecca in 1893, travelling from Yunnan to Bhamo by the caravan route, and then by boat to Rangoon, where he embarked in a pilgrim's ship. Having spent some time in the Sacred City, Ma Te-hsing visited Egypt and Constantinople, and returned in 1846 to Yunnan, by the river of Canton of West River. But against this view of the importation of plague by pilgrims in the 19th century there is evidence of a fatal sickness having occurred among rats and human beings in Yunnan, as far back as the last decade of the 18th century, which tends to indicate that some portion of Yunnan has been an endemic centre for over 100 years at least.

For the purposes of this report, the question as to whether Yunnan has been an endemic centre for over 100 years is not an important one. It is sufficient to know that plague has existed in Yunnan since 1871. Baker met with the disease in his travels through Yunnan in 1877. Monier Fenouillet, Bishop of Yunnan states that, in 1866 a large portion of the population of Yunnanfu succumbed to plague, and M. Rocher, in a second visit to Yunnan, found that plague began to be known in 1840, but long before that time it had existed in the western part of the province without prevailing epidemically.

8. The first medical account of plague in Southern China is given by Dr. Lowry, of Pakhoi, in 1882, the year he was first stationed there as Medical Officer to the Customs. His "Notes on an Epidemic Disease observed in Pakhoi in 1882" are reproduced in Appendix C, and are extremely valuable because of the very careful and accurate manner in which the disease is described, and because of the comparisons made between it and the plague of Yunnan and of Northern India. Dr. Lowry also observed the mortality in rats which accompanies the disease.

He remarks that "in nearly every house where the disease broke out the rats had been coming out of their holes and dying on the floors." The disease was not new to Pakhoi, nor to Lienchow, a city about 12 miles distant. In 1871, Mr. T. E. Cocker, the present Deputy Commissioner of Customs at Hongkong, visited Pakhoi, and at the time of his visit there was a severe outbreak of the disease, accompanied by a mortality, not only among rats, but also among pigs and cattle. Mr. Scott, the present Consul-General of Canton, saw cases of plague in Pakhoi in 1879. It was then called the "Yunnan sickness" by the Chinese. Mr. Netten Radcliffe, of the medical department of the Local Government Board of England, in his memorandum on the progress of Levantine Plague in 1878 and 1879 records some important information regarding plague at Pakhoi, derived from Surgeon A. R. Lynch's journal for H.M.S. "Mosquito," on the Chinese Station, 1879. It is accompanied by a map showing the presumed route taken by the plague from Pakhoi to Yunnan; and though the map is doubtless correct in showing the localities affected, it is incorrect as to the direction of the route by which plague spread, which was originally from Yunnan to Pakhoi, and not from Pakhoi to Yunnan.

Dr. Lowry states in his notes that "the epidemic which I have observed in this district does not seem to be an old disease, as it occurred for the first time about fifteen years ago, and since that time has occurred at certain intervals, the last severe outbreak being in 1877. I am told, however, that a few cases occur every year, but my short residence has not given me an opportunity of verifying this statement." Dr. Lowry further states, in reply to some questions on the subject, that plague first appeared in Pakhoi in 1867. It is to be noted that this was at a time when the Mohammedan rebellion in Yunnan was in full force, and troops raised in Hainan and the Pakhoi district were engaged at the seat of war.

9. Pakhoi is not a large town nor an old one. The population to-day is about 20,000, and it dates back only to 1852, when some Cantonese merchants settled there. It seems to have thriven fairly well, for it was one of the treaty ports agreed to be opened to foreign trade in 1860, though the actual opening did not take place for some years later. Its principal trade

most direct connection with Yunnan is to be seen on the map appended. The route is long and difficult, partly by land and partly by water.

From Pakhoi to Nanningfu the journey has to be accomplished overland, from Nanningfu to Posh by the West River, and from Posh to Yunnanfu again overland. Cotton goods are the principal staple article taken from the Port of Pakhoi to Yunnanfu, and there they are exchanged for tin and opium which are brought to the coast.

During the Mohammedan rebellion trade was much disturbed, and under the peculiar conditions it is less likely that plague was imported from Yunnan, by the ordinary limited intercourse of traders, into the Pakhoi district and the island of Hainan, than by the movement of Chinese troops, many of which, as previously stated, were drawn from the island of Hainan and from the western prefectures of Kwangsi and Kwangtung close to Yunnan. No doubt there would be many traders with the troops for the purpose of supply. This latter view of the manner in which plague spread from Yunnan to Pakhoi appears to be held by the Chinese, and it is more in accordance with that which is known concerning the rapid spread of epidemics from one distant locality to another, namely, that these epidemics of a sudden and rapid growth are usually associated with large movements of population. An epidemic of plague occurs in Yunnanfu in 1869 which decimates the population while they are in the midst of war, and in 1867 Pakhoi is attacked, one of the homes of returning troops from Yunnan.

This distance between Yunnanfu and Pakhoi is about 3,000 li, and it takes about forty-eight days to travel from one to another. What intervening localities were attacked is unknown, but it is unlikely they escaped.

Once the disease was established in Pakhoi it seems to have become endemic for eighteen years. There was a severe epidemic in 1877. Every year it recurred and prevailed more or less from March to June until 1884, when from the reports of the Medical Officer of the Customs it seems to have ceased until re-infected in 1894. This spontaneous cessation of the plague is a phenomenon which has not infrequently manifested itself in small towns, occasionally in large cities, and rarely in commercial towns, such as Smyrna and other busy entrepôts of trade in close communication with infected centres.

10. Although Pakhoi seems to have enjoyed a freedom from plague for ten years, from 1884 to 1894, the disease was far from being extinct; it not only continued to prevail in the Province of Yunnan and at varying intervals in the neighbouring towns of the Kweichow, Kwangsi, and Kwangtung Provinces, but it was also present in the adjoining prefectures to that in which Pakhoi is situated. They are localities away from European contact, and it is only incidentally that plague is discovered to prevail in them. Distant from the coast ports, from the customs stations, or from missionary outposts, news becomes exceedingly scanty, infrequent, and unreliable, and occurrences, however important or disastrous they may be to the localities affected, but rarely come to the ears of Europeans. It is certain that from 1890 a gradually extending area of the western parts of Kwangsi and Kwangtung was becoming affected with plague, but it is only in fragments of news that this fact is gathered.

In Dr. Sharpe's report on the health of Pakhoi for 1890 plague is thus referred to as occurring in some of the Kwangsi towns:—By a letter lately received from Lungchow we learn that bubonic plague (yang-tzu-cheng) or as it is known at Pakhoi, li-tzu-cheng, made its appearance there during the latter part of March this year. Having originated in Yunnan, it passed through the town of Posh and the prefectural cities of Nanning and Taiping in Kwangsi, and thence to Lungchow, also in Kwangsi. Considering that a certain amount of merchandise passes regularly between Nanning and Pakhoi it might be supposed the plague might find its way here, but up to the date of this report no cases have occurred since the spring of 1884.

The epidemic at Lungchow disappeared in April, 1890, after a heavy fall of rain. The next outbreak at Lungchow is heard of in 1893. As soldiers were the first victims of the outbreak, Dr. Simmonds, who was at Lungchow at the time, was of opinion that the disease was imported into the garrison of Lungchow from Lienchow, a frontier town on the borders of Yunnan. There was another epidemic in Lungchow in 1891, which was evidently a recrudescence of the outbreak of the previous year.

11. Notwithstanding that the plague did not reach Pakhoi from Lungchow, Taiping, or Nanning, we find that in 1891 Kaohiao, which is on one of the main trade routes from Taiping to Canton, and nearly 200 miles east of Pakhoi and nearer Canton, is affected by an epidemic of plague. Nor was the prefecture in which Pakhoi is situated free from plague even when Pakhoi enjoyed an immunity, for it is recorded that plague prevailed in March and April of 1891 in a district near Ampu. Thus:

"The native population in the immediate neighbourhood has not been visited by plague or any epidemic since influenza was prevalent during February of last year; but in a district near Ampu, about 100 miles to the east of this port, bubonic plague carried off a large number of people during March and April. I am informed by one of the French missionaries who has resided for many years in the neighbourhood of Ampu that 'bubonic' plague is endemic in a small district near that place, and that isolated cases will be found there at any time of the year, but that during the early spring of some years the disease occurs as an epidemic, and then the only chance of escape is to leave the district until heavy rain has fallen."

12. Still further east than Pakhoi or Ampu is Moulik, which is south of Kaohiao and near

the French possession of Kwan-shan-wan. From a medical missionary I learn that a severe sickness which is believed to have been plague prevailed at Moulik in 1890, and from Dr. Swan of Canton that early in 1893 a severe epidemic which was ascertained to be plague, and which destroyed several hundreds of the inhabitants, attacked the locality. Moulik is about 300 miles south-west of Canton. It is evident that in the three years from 1890 to 1893 plague was every now and then reported as prevailing in different places in the south-western portions of the two provinces of Kwangsi and Kwangtung.

13. If we now go back to the Yunnan Provinces we shall find that as soon as the Customs opened a station at Mengtze, one of the principal towns in the south-east of the province, plague is immediately reported as epidemic there. It is the usual history of plague in China. Nothing is heard of it in a particular locality until that locality is visited by a European. The disease prevailed in Mengtze for many years prior to the advent of the Customs officers, but it was not discovered and described by a European medical man until 1894. By the time Dr. Michoud's report on plague in Mengtze was issued the disease had appeared in an epidemic form in Canton, Hongkong and Macao.

Mengtze is situated in the south-eastern part of Yunnan, in latitude 23° 34' N., and longitude 103° 36' E. Like most of the principal towns of Yunnan, it is in the middle of a large plateau elevated 4,500 feet above sea-level and surrounded by mountains rising from 6,000 to 9,000 feet above the sea-level. The town is the centre of a large traffic between Yunnan and Tonking.

The Imperial Chinese Customs opened a station at Mengtze in 1890, and the European officers on their arrival found plague prevailing. It had recurred every year in Mengtze since 1885, and first appeared there in 1874. There was a severe epidemic in 1892, but according to native reports, the epidemic of 1893, which continued during the months of June, July, and August, was, compared with previous epidemics, not particularly severe. Dr. Michoud, in describing the epidemic, remarks that "however, out of an estimated population of 10,000 or 12,000, a thousand people died. Carried outside the dwellings, the victims of plague lay dead or dying unheeded in the streets, or set in rows leaning against the city wall. We saw, on some roads, dogs and pigs feeding undisturbed on corpses which no one cared to bury. These animals fell victims to their voracity and succumbed to the plague." Dr. Michoud continues: "In some places whole families disappeared. At the beginning of the last epidemic, we were called to the young son of the Chen-tai (Chinese general) of Mengtze. The poor boy had just been given over by the native doctors, who, probably from fear of displeasing the father would not declare the nature of the disease. As we were aware of a case of yang-tzu-cheng having already occurred in the Chen-tai's yamen—considering, too, the rapid evolution and extreme gravity of every symptom exhibited by the little patient—disregarding, at the same time, the hypothesis of heat-stroke or perniciosis intermittent fever, we had no hesitation in spite of the absence of any external adenitis (and to the great displeasure of the father) in diagnosing yang-tzu-ping. Although ready to do our best we insisted on the probable failure of any treatment, and urged the necessity for immediate and energetic disinfection in order to ward off further diffusion of the disease. The boy died shortly afterwards. None of the measures advised were taken, because the native quacks denied the accuracy of the diagnosis. Doubtless the failure of our treatment had discounted the value of our advice. However that may be, the Chen-tai, an old warrior who had spent his whole life in Yunnan, and had passed unscathed through the previous epidemic which decimated the country, was, in a few days after the death of his son, attacked by yang-tzu-ping and speedily perished. Some of his wives many of his relations and servants, were in succession attacked, all the cases ending fatally. The people that died from yang-tzu-ping in that yamen before the end of that epidemic numbered at least 25."

14. The epidemic described at Mengtze, following as it did a severe epidemic in 1891, occurred in May, June, and July of 1893. Two months later the disease is stated to be epidemic in Lungchow and in many towns of the Kwangsi Province, such as Nanningfu and Kwaifu, the latter of which is not more than 200 miles from Wuchowfu.

15. In connection with the prevalence of plague in Yunnan and its spread to Southern China, the following remarks of M. E. Rocher are interesting: "As it was to be feared that either the Canton River by Paise, or the Red River by Manghao and Loakay, would become infected by the disease, I reported the matter to the (French) Colonial authorities. I do not know what steps were taken, but in 1892 the inhabitants of Manghao, on the banks of the Red River, reported that plague had made its appearance, and soon afterwards the same news came from Paise, from which place it descended to Pakhoi and Canton." (Appendix E.)

16. It is clear that plague was extensively diffused at this time. It was epidemic to Mengtze in 1893, and the several years previously. It was also epidemic in some of the south-western towns of Kwangsi, especially those situated on the West or Canton River, and it was more or less prevalent in the south-western districts of Kwangtung. The existence of plague in these places excited no interest beyond the localities affected, and it was not until the disease reached the Delta of the West River and attacked Canton, the capital of Kwangtung, and an epidemic of exceptional proportions began to devastate the city in the spring of 1894, that the fact that plague in a dangerous form existed in China became generally known to the Europeans living in that country.

(b) AFTER THE OUTBREAK IN CANTON IN 1894.

1. Canton is the chief port, as well as the largest and most important city in South China. It is the capital of the Kwangtung province, and contains a population variously estimated at 1½ to 2 millions. Situated in 23° of latitude N., and 113° 14' longitude on the banks of the Pearl River, it is some 70 miles from the coast, and in the centre of a district traversed and intersected with waterways, formed by the convergence of several rivers from the north, east, and west. By this network of waterways, Canton is connected with the chief towns and districts in Kwangsi and Kwangtung. At the mouth of the Pearl River lies Macao on one side, and the Colony of Hongkong on the other.

The inland water communications of Canton extend westward to the borders of Yunnan and Kweichow. The Sikiang, or West River, or Canton River as it is sometimes called, is navigable for small steamers as far as Wuchowfu. From there is Nanningfu the passage is more difficult on account of some dangerous rapids, but native boats make it successfully, and ply between the two towns. From Nanningfu to Posh the river is suitable for light-draught boats, which are busily engaged in carrying produce to and fro. Posh is on the borders of Yunnan, and the produce reaching it by boat is taken by pack animals overland to Mengtze.

West of Nanningfu a branch of the river leads to Taipingfu and Lungchow. It will be seen from the map that Mengtze and Lungchow, both infected centres of plague, are on lines of direct communication with Canton. The West River is the natural and most convenient trade route for produce and traffic from Yunnan, Lungchow and the greater portion of the Kwangsi province, but, as previously stated, notwithstanding the advantages of this route, it used not to be favoured by Chinese merchants, who preferred to take their merchandise from Nanningfu overland to Pakhoi, rather than direct to Canton. The reason of this was partly because it was a shorter route to the coast but mainly because of the numerous link charges between Nanningfu and Canton, there being no fewer than sixteen link stations. This was altered in 1891, and the system of transit passes introduced, which resulted in a greater use of the West River for the conveyance of produce and passengers both to and from Canton.

Whether plague reached Canton from the infected towns and villages of the south-western part of Kwangtung or direct from Yunnan and Kwangsi by the West River is immaterial. Probably the infection arrived by both channels; but, whichever was the first, the original source was Yunnan. Fatshan, a town situated on the delta of the West River and a few miles from Canton, is said by some Chinese gentlemen to have been infected in 1893. It is the custom of the Chinese to send their dead to be buried in their native village or town, and the infection at Fatshan is attributed by them to bodies of persons who died of plague at Mengtze having been sent to Fatshan for burial in badly fitting coffins. The first cases in Fatshan occurred in families who were connected with Mengtze. It has already been noted that both at Mengtze and Lungchow, plague occurred among the military stationed at each place, and it is a curious fact that the first case in Canton seen by a European physician was in the family of a soldier.

2. The first recorded case of plague in Canton occurred on January 16th, 1894, when Dr. Mary Niles was called in to see General Wong's daughter-in-law, who was reported to be suffering from a "boil," and who, when seen, was found to have a very painful swelling in the inguinal region, a temperature of 104.8 with a pulse of 150, and a petechial eruption. The patient recovered, but the boils, owing to sinuses forming, took a very long time to heal. Out of seven cases seen by Dr. Mary Niles up to May 2nd, in no fewer than four purpuric spots appeared before death. In a number of cases met with the illness was of a light character, for instance, Dr. Niles records a case in which "a lady came in a chair but walked into the office. She looked perfectly well, temperature, pulse, and digestion normal. She said she had fever six days before, and the following day when taking a bath discovered a swelling in the inguinal region, of which she had not previously been aware, and which caused her no pain. I examined the bubo and saw for myself." This case is suggestive of other similarly mild cases and the likelihood of these occurring at an early stage of the outbreak without attracting any special attention. Dr. Niles further states, "It has been noticeable in the people that rats in infected houses have died. In the house where the child from the school was visiting when she took the disease thirteen dead rats were seen; out one morning. One of the officials; I am told, offered to cash for every dead rat brought to him. He had collected 35,000 in one month; 2,000 were brought to him in one day."

It was only towards the end of March that the disease began to attract attention. Dr. Alexander Rennie reports that "a few stray cases occurred in the beginning of March, but it was not until the end of the month that attention was awakened on account of its fatal prevalence in a poor neighbourhood near the south gate of the city, and also in Nan-sheng-li, a quarter occupied by Mohammedans, among whom the mortality was very high. At this time the type of the disease was exceedingly severe—of those attacked quite 80 per cent. dying. Towards the middle of April the cases we saw were of a milder type, but the disease subsequently became more severe, and extended its boundaries to other parts of the city and also to Hoiann, the maximum mortality being reached about the middle of May. Rain fell copiously during the month of May and beginning of June, so that many streets were under water; the temperature remained comparatively low. But both these factors seemed to favour the propagation of the disease, as by the beginning of June it was rife in the western suburbs as well

as in the surrounding towns and villages. It is impossible to give any correct estimate of the mortality, as no official records of burials are kept. Comparing the estimates obtained from various sources, we believe the mortality from the beginning of the epidemic to the middle of June (the date of writing) to have been about 40,000.

"Although a goodly number of well-to-do people fell victims to the pestilence, the chief sufferers were the poor—over-crowded and badly housed. The people who escaped the scourge in the most marked degree were those living in upper stories and the floating population. With the exception of those put in boats after falling sick, scarcely a case was noted on the river. Many well-to-do people, observing this immunity, removed from their houses and made their homes on the water. Judging from this circumstance, therefore, and also from the fact that rats living in the ground and drains were the first animals to fall victims we infer that the specific poison emanated from the soil. What the specific poison may be is not determined, but no doubt the insanitary conditions referred to, exaggerated by a prolonged drought, provided a specially suitable nidus for its growth and dissemination.

"The immunity enjoyed by residents on the foreign settlement of Shamian is remarkable, seeing that it is separated only by a creek some 20 yards wide from houses where cases of plague occurred. Not only did foreigners living on the settlement enjoy excellent health, but no case of plague occurred among their servants living on the premises. The rats also, up to the time of writing, remain healthy and lively."

Dr. Rennie further states in this report that on the outbreak of the disease occurring in Canton many persons, especially the well-to-do, removed to the country, thus forming fresh foci for its dissemination; and in the same way the outbreak in Hongkong no doubt arose from persons having migrated from Canton to Hongkong, while actually suffering from the disease, or during the short incubation period.

Dr. Mary Niles also states that "patients went home to the country in passage boats, some died in the boats, and others in their native towns." Under such circumstances and from such a centre as Canton, which communicates with so many places, the infection was bound to be disseminated.

3. The largest and most important European possession near Canton is Hongkong, situated at a distance of only some 20 miles, with daily river communication with Canton both by steamers and junks. Hongkong, on account of its position at the mouth of the Pearl River, its population being mainly Cantonese, and the great and increasing traffic with Canton has been suggestively called the suburb of Canton. The extent of intercourse between the two ports may be gathered from the fact that nearly half a million of people pass each way to and from annually, and some 4,000 river steamers and 8,000 junks annually enter the port of Hongkong from the Canton and West River district, most of them coming from Canton and its neighbourhood.

4. Under such conditions it is not surprising that whatever affects Canton is not long in making itself felt at Hongkong. This year when cholera broke out in Canton there was only an interval of a few weeks before the disease appeared in Hongkong. And so it was with plague in 1894. As soon as the disease was well established in epidemic form in Canton, it was discovered to be present in Hongkong.

Although there is no positive evidence of the first cases of plague coming from Canton, rather than from the other affected areas in its vicinity or from Pakhoi, yet as large numbers of the inhabitants in order to escape plague were fleeing from Canton to Hongkong, the probabilities are greatly in its favour, particularly so when the enormous ordinary traffic is taken into account, together with the circumstance that detection of sick persons entering the Colony is impossible, because there is no system of inquiry as to sickness, nor is there any inspection of passengers on steamers and junks from Canton or from the West River.

Dr. Lawson, in his able report on the epidemic of bubonic plague in Hongkong in 1894, is of opinion that the disease was imported from Canton rather than from Pakhoi, where it did not prevail until the latter part of the spring, and between which and Hongkong the traffic is insignificant compared with that between Hongkong and Canton. Once introduced into Hongkong, the disease caused the greatest alarm, but the epidemic, though severe, is not to be compared in intensity with that in Canton, even if the lowest estimate of 40,000 be accepted as the highest number of deaths. Many in Canton have estimated the deaths from plague in that city in 1894 to have been between 80,000 and 100,000. The deaths in Hongkong did not exceed 3,000.

In neither city do the figures given represent the total number of cases of plague or extent of mortality, for at the height of each epidemic the Chinese fled from both Canton and Hongkong to their homes, many of them dying on the way or sickening with plague on their arrival.

5. It was in the Hongkong epidemic of 1894 that the causal agent of plague, the plague bacillus, was discovered by Dr. S. Kitasato of Tokyo, on June 14th. Later Dr. Yersin made independently a like discovery in Hongkong. The Hongkong epidemic began in May and ended in August, and its incidence was proportionately more severe on the female portion of the population than on the male. Macao did not suffer epidemically from the disease until April, May and June, of 1895. During the winter of 1894 and 1895 there prevailed a fatal epidemic which attacked the respiratory organs, and which was believed to be influenza. It is worth noting that this was at a time before the pneumonic type of plague was recognised as a variety of the disease. The first case of bubonic plague which came under the notice of the Portuguese authorities was an imported case from Hongkong, and to this source is ascribed

the origin of the epidemic; but as the case came under the care of the sanitary authorities the next day after arrival, also as there was a high mortality among the Chinese with no means of ascertaining the exact cause of death, and as the epidemic quickly followed the introduction of this single case, which is an unusual occurrence with plague, whose progress at the beginning is generally slow, it is likely that Macao was infected earlier. The epidemic reached its acme in April and May and disappeared in June, and returned in 1897 and 1898. From the position of Macao and its intercourse with Canton, Pakhoi, Hongkong, and the villages of the delta, it could only be a matter of time for it to be infected by people from one or all of these places.

6. With Canton, Hongkong, Macao, and Pakhoi infected with plague, it was not long before the disease became extensively diffused. The disease in Southern China appears, however, to have mainly kept to the towns and villages situated near the coast and on the principle rivers. It has not spread northward into the Provinces of Honan and Kiangsi. The Provinces of Kwangsi, Kwangtung, and Fukien which are infected, are separated from those on the north of them by a range of mountains which, commencing in Tibet, passes through Yunnan and Kweichow, and, under various names, extends eastwards to Cheukiang on the sea-coast. This range forms a natural boundary limiting the commerce between the north and south. From the range spurs come down southwards with valleys between, and these are streams and rivers joining the North, South, and West River already mentioned, which form the natural channels of communication between different parts of the provinces. Inland the great highways are the rivers and streams, while on the coast communication from place to place is principally by sea. The infection, so far as can be ascertained, has mainly affected first the towns on the rivers and coast, gradually spread from them to the adjacent villages, and then from village to village.

Except in the towns and villages where missionaries reside and visit, or in those immediately adjacent to the treaty ports and near the customs stations, it is next to impossible to obtain any reliable information concerning the prevalence of disease in China. Even in those mentioned as exceptions, it is not easy, because the Chinese think it unlikely to refer to misfortunes. They are reticent among themselves on the prevalence of plague, and are generally reluctant to speak about it freely with foreigners.

7. The events occurring in the neighbourhood of Swatow may, however, be taken as an index of what is occurring elsewhere in the infected provinces of Kwangsi, Kwangtung, and Fukien. I visited Swatow and some of the villages near it, and had the advantage of being accompanied by Dr. Lyne or Dr. Lyall, both of whom are familiar with the town and district, in which they have practised many years. Both take a great interest in the spread of plague, and have kindly prepared for me a map of the infected districts. Dr. Lyall is the oldest practitioner in Swatow, having been there some twenty-three years. His connection with the mission brings him much in contact with the Chinese, while the branches of the mission give him opportunities of hearing of infected villages which do not readily come to others. But even with such exceptional opportunities of acquiring information, the extent of plague is seldom ascertained even when the disease is known to prevail.

From the map, which gives the year in which the towns or villages were first infected, and in some cases the direction in which the plague spreads, it will be seen how slowly but surely the disease is infecting village after village and town after town. I quote Dr. Lyall's explanation:

"If you will look carefully over the map, you will notice that there seem to be two ways by which the plague spreads. One is by radiating from centres into neighbouring villages, and the other is by making a 'jump' as it were over considerable distances to some town beyond, without infecting intermediate places. Then the new places form a centre of infection by radiation and 'jumping.' Thus to the north you will find Ung Kug infected, and none of the villages between it and Swatow being yet infected. From Ung Kug it has spread to Chih-na, but has not gone inland yet. To the west, Mai-On, a town 60 miles from Swatow, up the river, was the first place infected, and it was infected not from Swatow, but from Hwei-hai, between which towns there is a large carrying trade of salted fish. One of the coolies engaged in the portage contracted the disease and died at Mai-On. From Mai-On it spread to Li-On, near Swatow. There is a series of villages, Tsun-pho about 8 miles from Kuei-Yang. In this series of villages in the same year one was infected from Chih-na (between which villages there is a large trade in salted vegetables, and as in Mai-On one of the coolies contracted the disease in Chih-na) and one from Swatow. You will also notice that this year the plague has 'jumped' from Kuei-Yang to Thung Khe, a distance of at least 12 miles, and it has already, during this year infected two or three neighbouring villages to the south and west. There seems to be no plague from Cupu westward. Kuei-Yang in the west was infected from Hongkong—a man came from Hongkong, developed plague, and died. Next year it appeared in epidemic form. The Chinese say Kuei-Yang is a dirty town, so it must be dirty. From Kuei-Yang, the other places in that region have been infected. The only village in the estuary so far infected is Chih-shan. This village is the trade terminus for Tuen-ai. Boats carry goods to Chih-shan, and the goods are then carried by road to Tuen-ai. It has been infected secondary to Tuen-ai. With regard to question 13—what I mean is this, in a good many places where plague has broken out in a Chinese house I personally know that dead rats have been found behind furniture, &c. And it does seem that from one place to another, one way at least of carrying the plague is by infected individuals. At the same time I must say that in scores of cases when infected persons have been carried to their homes and died, no epidemic has resulted. As Thung Khe—I sent to a pupil for particu-

lars. The plague is rife in two villages about 2 miles distant, and rats and mice are dying in Thung Khe itself, but no person has been infected yet. Perhaps I should explain that in this part of China villages are often arranged in groups under a common name, and that each village has its own special name in addition, thus 'Thung Khe' is not only the name of the village, but of a group of villages lying around it. The condition of affairs is this: Two of the outlying villages are infected with plague, but in Thung Khe itself rats only are dying.

"I hear from another pupil about a group of villages called 'Tek Kee,' 5 miles from Kuei-Yang. This year a native of one of the villages contracted the disease at Chao Chow-fu, was taken home, and died. Since then a few more cases of the disease have occurred. It will be interesting to see if it becomes epidemic in Tek Kee next year. Though only 5 miles from Kuei-Yang, where the disease had been very bad for a few years, it has escaped, and now it has been infected from Chao Chow-fu, at least 30 miles distant. It is only in the villages one can hope to trace the origin of the infection. Towns and cities are absolutely hopeless."

Swatow is in the province of Kwangtung at the mouth of the river Han, and is in longitude 116° E. and latitude 23° N. It is a mercantile town, with a population of 30,000 to 35,000 inhabitants, the greater proportion of which are males whose wives and families reside in the surrounding villages. There are a number of emigrant houses for the lodgment of emigrant coolies drawn from the surrounding district and on their way to Amoy, Hongkong, Singapore, Bangkok, Saigon, and other ports. The town is generally considered to be clean, the Chinese thoroughfares have drains, the two main thoroughfares are high water, and kept closed at night in order that the drains may act as a reservoir in case of fire. No excreta pass into the drains. There are no sanitary laws or regulations. The inhabitants of the two main thoroughfares employ their own scavengers, and the 'Tai Hong Hong' Society employ thirty scavengers and make it their responsibility for the early burial of the dead. The other portions of the town are very filthy. The houses are one-story, badly lit, and badly ventilated; swine, fowls, children, and adults enjoy the same privileges in common as regards accommodation both inside and outside the house, and the smell of the latrines, which are open cesspools or reservoirs, is such as to make with it nearly every corner, is such as to make a European shudder; and yet it is said to be one of the cleanest towns in that part of China. It is amidst these conditions that the Chinese live, and they are similar to those under which plague prevailed in Europe in the 14th century.

The first cases of plague which appeared in Swatow and in Chao-yang in 1894 were imported from Hongkong. Chao-yang is a residential town of nearly 100,000 inhabitants, is a few miles distant from Swatow, and contains many shops and traders connected with Canton and Hongkong. Dr. Lyne was in hospital in Chao-yang in 1895 when he was infected from Hongkong with two friends in 1894. The three suffered from the disease, and only one recovered. In Chao-yang, and only this one recovered. In Chao-yang, and only this one recovered.

In 1898 the port of Swatow, Chao-yang, and Hwai-hai, and Nanking to the north.

In 1899 Amoy and villages, north and south-east, Nanking, north, and Hwai-hai and Kentsu to the south-east.

In 1900 Chao-yang, part of the city of Chow-chow, and Nanking to the north.

In 1901 Amoy and surrounding villages, Kuei-yang, Posing, and Tathoupo. It also prevailed in Nanking and in the port of Swatow.

8. The description of one village applies to most others. Swatow is about an hour and a half's sail from Swatow. The houses are clustered together with a few lanes of some 6 to 8 feet in width and some passages not more than 4 feet intersecting the villages. Fronting the lanes are shops and houses and entrances into courtyards. The shops are narrow, obtaining their light only from the front. The houses in many instances are entered direct from the street and consist of one or more rooms, and are usually devoid of other means of light than the door; sometimes there is a small window of 1 foot in length 9 inches in breadth. Other entrances give access to a small courtyard, around which are windowless buildings entered by separate doors. In fine weather the inhabitants, when out in the fields, spend most of their time in the courtyard or in the street. At the time of the visit garbage was to be seen heaped up almost everywhere, being thrown out of the house and left to the disintegrating forces of nature and of the pigs and fowls. Pigs moved or lay about the lanes, or were in the courtyard or in one of the rooms of the house with the fowls. Calves and cows were usually tied in some corner of the lane or were in the courtyard. The drains were full of foul, putrefying black mud or stinking water which could get no outlet, being blocked with garbage. Streets, passages, and courtyards were a mass of uncleanness. The latrines, however, were well built, reserved, the faeces and urine being valuable, but the smell from them was extremely offensive. Several of the windowless houses were closed because their inmates had fled from them either to other villages or to the hills to escape from the plague, which had been in the house. Among this category of badly-lighted, badly-ventilated, and filthy houses there were a few to be seen better built, better lighted, and cleaner. They were the exceptions, and they had escaped plague. Outside the village are the fishponds, which also have latrines over them. The ponds, when emptied, supplied the mud taken from them a valuable manure. Just before leaving Hongkong I received a letter from Dr. Lyne mentioning that this village had been very heavily struck with plague, and had lost nearly half of its inhabitants. I thought it seldom attracts outside notice, mortality in some of the villages and towns is very great. In a town of some 15,000 inhabitants, not far south of Chao-yang, it is estimated that over 3,000 died. In Amoy, a cluster of villages about 10 miles from Swatow, and a centre for rice, fruit, and vegetables to be brought down to Swatow, the mortality was so great in 1901 that the inhabitants of whole villages fled en masse, and got up boats and lived in the river, while others deserted their villages and put up small huts along the coast. Nearly all the large villages between Hongkong and Swatow are affected.

its population, if one may trust Chinese statistics. The same tale is told of most of the villages and small towns which have become infected with plague. Large towns seem to fare very much like a cluster of villages or towns, one portion being badly affected and another portion another year.

One of the characteristics of plague seems to be an alternating severe and mild epidemic for one year the town or village is attacked badly, while in the next year it is only slightly affected. In Chao-chow-fu, for instance, a town of some 200,000 inhabitants, the first outbreak was in 1898 and was bad, the second was in 1899 and was light, the third in 1900 bad, and the fourth in 1901 light. This may possibly be explained by the rate mortality in the severe epidemics considerably reducing the number of rats to be attacked next year.

10. The agents by which the plague spreads from village to village and town to town, as shown in the reports, are sick persons or infected clothing, or sick rats brought in boats from one house, rats or infected persons, and from person to person in the same house, direct infection, infected food, and infected vermin.

11. The following is a summary of the opinions formed by personal observation of the main cause or causes of the spread of plague. [Here follows a summary of 34 different opinions with names and references.]

12. Apart from the question of the main causes of the spread of the disease, it is worthy of note that of 37 correspondents with experience of plague epidemics, 30, or over 80 per cent., had found the plague outbreak preceded by mortality among rats; 4, or 10 per cent., were of opinion that the rat mortality was simultaneous with the plague outbreaks, 2 did not answer the question, and 3 stated it was unknown, though of opinion that rodents introduced the disease. The consensus of opinion that the rat mortality is a precursor of plague in man is practically unanimous, not only among medical men in China experienced in plague, but among the Chinese people whose villages or towns have been attacked with plague. Dr. A. Lyall refers to this common notion. He states: "It is generally recognised by the Chinese that rats die first. During the year I have often been told that 'rats are dying in such and such a street; rats have begun to die in another street, men not yet.' Dr. Vandenberg states that: 'The natives who left their villages in a body, and came to our market, say that the rats would be found in the morning dead on the floor, and that they knew it was plague, and hence ran away. Half of their village had died of it before they came.'"

Dr. H. W. Dobson states that: "Dead rats are generally numerous just before an outbreak. Chinese seem to look upon this as preceding plague."

13. That rat mortality precedes an outbreak of plague is a fact the significance of which is all-important. Were man and rats attacked concurrently at the commencement of an outbreak, the spread of an epidemic would have to be sought in some common media containing the infectious material, and which were likely to affect both simultaneously. But the antecedence of the rat plague points to a channel of infection which is capable of giving the disease to the rat, but which at first has no influence on man, and that dissemination of the infection by the rat is needed to bring it into those channels by which man can become infected.

(To be continued.)

THEATRE ROYAL CITY HALL

FOR A SHORT SEASON Commencing SATURDAY, the 23rd May, 1903.

THE TRIPLE ALLIANCE. The Success of the Season ALVA THE GREAT. Premier Modern American Magician, Ventiloquist and Hypnotist. Supported by MDLLE. REUX, THE PARISIENNE THOUGHT-READER.

THE GIRL WITH BLACK HAIR, A PHYSIOLOGICAL PHENOMENON OF THE 19th CENTURY.

AND M. DE VARVILLE, The Famous Spiritualistic Medium in modern American Magic presenting THE BRIGANDS' BOX.

A SIMILAR SEANCE, The Dramatic Illusion "SHE" or only a dream, in which a lady is consumed in flames, and all the latest novelties in the MODERN AMERICAN MAGIC.

POPULAR PRICES: 5s, 2s, and 1s. Doors open at 8 p.m. Overture at 9 p.m. under the direction of E. J. CHARD. Hongkong, 18th May, 1903. [595d]

AUSTRIAN LLOYD'S STEAM NAVIGATION COMPANY.

NOTICE TO CONSIGNEES. FROM YOKOHAMA AND KOBE.

Having arrived from the above ports, consignees of cargo are hereby informed that their goods are being landed at their risk in the Hongkong and Kowloon Wharf and Godown Company, Limited, whence delivery may be obtained.

No claims will be admitted after the Goods have left the Godowns, and all claims must be sent to the Office of the Undersigned before Noon on the 23rd instant, or they will not be recognised.

No Fire Insurance has been effected, and any Goods remaining in the Godowns after the 23rd instant will be subject to fire.

Bills of Lading will be countersigned by SANDER, WELER & CO. Agents. Hongkong, 18th May, 1903. [595e]

HONGKONG JOCKEY CLUB.

MEMBERS are hereby notified that for their convenience the PLANS of the proposed New Buildings to be erected in the Jockey Club Enclosure are now on view in the Office of Messrs. HUGHES & HOUGH, 8, Des Voeux Road Central.

In the event of any Member having a suggestion to make, it is hoped that he will do so, in writing, on or before NOON on SATURDAY NEXT, the 23rd instant, on which date the Plans will be removed.

By Order, T. F. HOUGH, Clerk of the Course. Hongkong, 18th May, 1903. [596e]

FEDERATED MALAY STATES.

NEGRI SEMBILAN GOVERNMENT. ASSISTANT SURGEONS WANTED.

1. Applications will be received for the Post of qualified ASSISTANT SURGEONS in the NEGRI SEMBILAN GOVERNMENT SERVICE, FEDERATED MALAY STATES. Salary \$1,138 per Annum with Annual Increments (to be granted subject to conduct being satisfactory) as specified hereunder, and free furnished Quarters and allowance for Lighting.

2. Appointments will be made, in the first instance, ON PROBATION ONLY FOR SIX MONTHS, at the end of which time, if satisfactory the holder of an Assistant Surgery will be confirmed. He will then be required to sign an agreement for five years, on expiry of which, should his service continue to be satisfactory he will be put on the Fixed (Permanent) Establishment.

3. Candidates must hold some such diploma as the L.M. and S. of a recognised Medical College.

4. Applications with copies of recent testimonials will be received by the Secretary to Resident, Negri Sembilan, Malay Peninsula.

5. Free and class passage to Negri Sembilan will be granted TO THE CANDIDATE APPOINTED, and on his being confirmed in the appointment, to his wife and not more than 2 children. If he is not confirmed and his conduct has been satisfactory his passage back to India will also be defrayed by Government.

6. Free fully furnished quarters and lighting will be allowed.

SCALE OF SALARY.

1st year agreement \$1,138.
2nd " " 1,248.
3rd " " 1,320.
4th " " 1,380.
5th " " 1,432.
6th " " 1,484.
7th " " 1,536.
8th " " 1,588.
9th " " 1,640.
10th " " 1,692.
11th " " 1,744.
12th Examination 2,120.
Final 2,520.

N.B.—Candidates should note—
(a) That the present VALUE OF \$1 is about 18 or Rs. 1/4.
(b) That NO PRIVATE PRACTICE will be allowed.

(c) That 4% is deducted from salary monthly as a contribution to Widows and Orphans Pension Fund after confirmation in appointment.

(d) That qualification for pension cannot be attained before the age of 55 except on the grounds of ill-health or abolition of office.

Approved candidates will be expected to assist the State Surgeon in discharging in addition to ordinary Medical and Surgical duties, and without extra remuneration, such services as Government may require of them. The following are some of those now required:—

(i) To take and record Meteorological Observations.

(ii) Test for poison, etc. and for adulteration, of milk, food, etc.

Intimation.

THE HONGKONG TELEGRAPH.

1, ICE HOUSE ROAD,

HONGKONG.

CABLE ADDRESS.—Telegraph, Hongkong.

THE leading English Newspaper in China

Also widely circulated in Japan, Ceylon, China, Ceylon, India and the Far East generally.

A daily newspaper with weekly edition published for despatch by the homeward mail

The daily is recommended as more generally suitable, except for subscribers in Europe or America.

A special feature is made of full and accurate reports of local occurrences, and of matters of general interest.

ADVERTISING DEPARTMENT.

The Hongkong Telegraph is the best medium for advertising in China. It circulates largely among all classes of the community, is the largest daily newspaper and has a wider circulation than any journal in the Far East.

Special attention given to effectively displaying advertisements.

The type used as a standard for setting advertisements is similar to this, unless we are instructed to display the advertisement when any effective style of type will be adopted.

This standard runs exactly eight lines to the inch, and about eight words to the line.

ADVERTISEMENTS RATES.

(per inch.)

One week.....\$ 2.35

One month.....7.20

Two months.....13.00

Three ".....20.00

Six ".....37.50

Twelve ".....73.00

No charge less than one dollar.

Discount allowed on—

3 Months Contracts.....5 per cent.

6 ".....10 "

12 ".....25 "

DOMESTIC OCCURRENCES.

Notices of Births, Deaths, and Marriages

\$1 each insertion in the Daily and Weekly.

CONTRACT ADVERTISEMENTS.

Special Rates for standing advertisements

can be ascertained from the Manager.

Advertisements for the Daily should reach the Hongkong Telegraph Office not later than noon of the day they are intended to appear.

Unless otherwise specified all advertisements will be repeated and charged for until countermanded.

JOBING DEPARTMENT.

Job Printing of all descriptions undertaken.

PROGRAMMES.

PAMPHLETS.

CARDS.

CIRCULARS.

EXPRESS.

All job printing is done under European supervision, well turned out, free from errors, and remarkably cheap at

THE HONGKONG TELEGRAPH OFFICE.

THE WEATHER.

The following report is from Mr. F. G. Figg, Acting Director of the Hongkong Observatory—
 On the 18th at 11.15a. The barometer has risen over E. Japan, fallen in W. Japan.
 The depression is moving into the Yellow Sea to the North of Shanghai. Pressure is high over SE. Japan, S. and SW. winds, decreasing in the Formosa Channel and N. part of the China Sea.
 Forecast:—moderate SW. wind, squally, thundershowers.

WEATHER-FORECASTS AND STORM-WARNINGS ISSUED FROM THE HONGKONG OBSERVATORY.

METEOROLOGICAL SIGNALS.

Meteorological signals are hoisted on the mast beside the Time-ball at Kowloon Point for the information of masters of vessels leaving the port. They do not imply that bad weather is expected here—

A DRUM indicates a typhoon to the Eastward of the Colony, (i.e., in the East quadrant, N.E. to S.E.)

A BALL indicates a typhoon to the Westward of the Colony, (i.e., in the West quadrant, S.W. to N.W.)

A CONE Point Upwards indicates a typhoon to the Northward of the Colony, (i.e., in the North quadrant, N.W. to N.E.)

A CONE Point Downwards indicates a typhoon to the Southward of the Colony, (i.e., in the South quadrant, S.E. to S.W.)

Red Signals indicate that the centre is believed to be more than 300 miles away from the Colony.

Black Signals indicate that the centre is believed to be less than 300 miles away from the Colony.

NIGHT SIGNALS.

Two lanterns hoisted vertically indicate bad weather in the Colony and that the wind is expected to veer.

Two lanterns hoisted horizontally indicate bad weather in the Colony and that the wind is expected to back.

The signals are repeated on the flagstaff of the Godown Company at Kowloon, and also by day only, at the Harbour Office and on H.M.'s Receiving Ship.

LOCAL STORM-WARNINGS.

The Colony itself is warned of approaching typhoons by means of the Typhoon Gun placed at the foot of the mast, which is fired whenever a strong gale of wind is expected to blow here.

NOTICE BOARDS.

Notice boards are placed at:—

- Joint Cable Companies' Office.
- Ferry Company's Pier, Ice House Street.
- Blake Pier.
- Post Office.
- Harbour Office.
- Office of the Wharf & Godown Company, Kowloon.

WEATHER-FORECASTS AND STORM-WARNINGS.

WARNINGS are exhibited on the above boards daily about
